Rich's lesson module checklist

Last updated 4/18/2018

- ❑ Zoom recording named and published for previous lesson

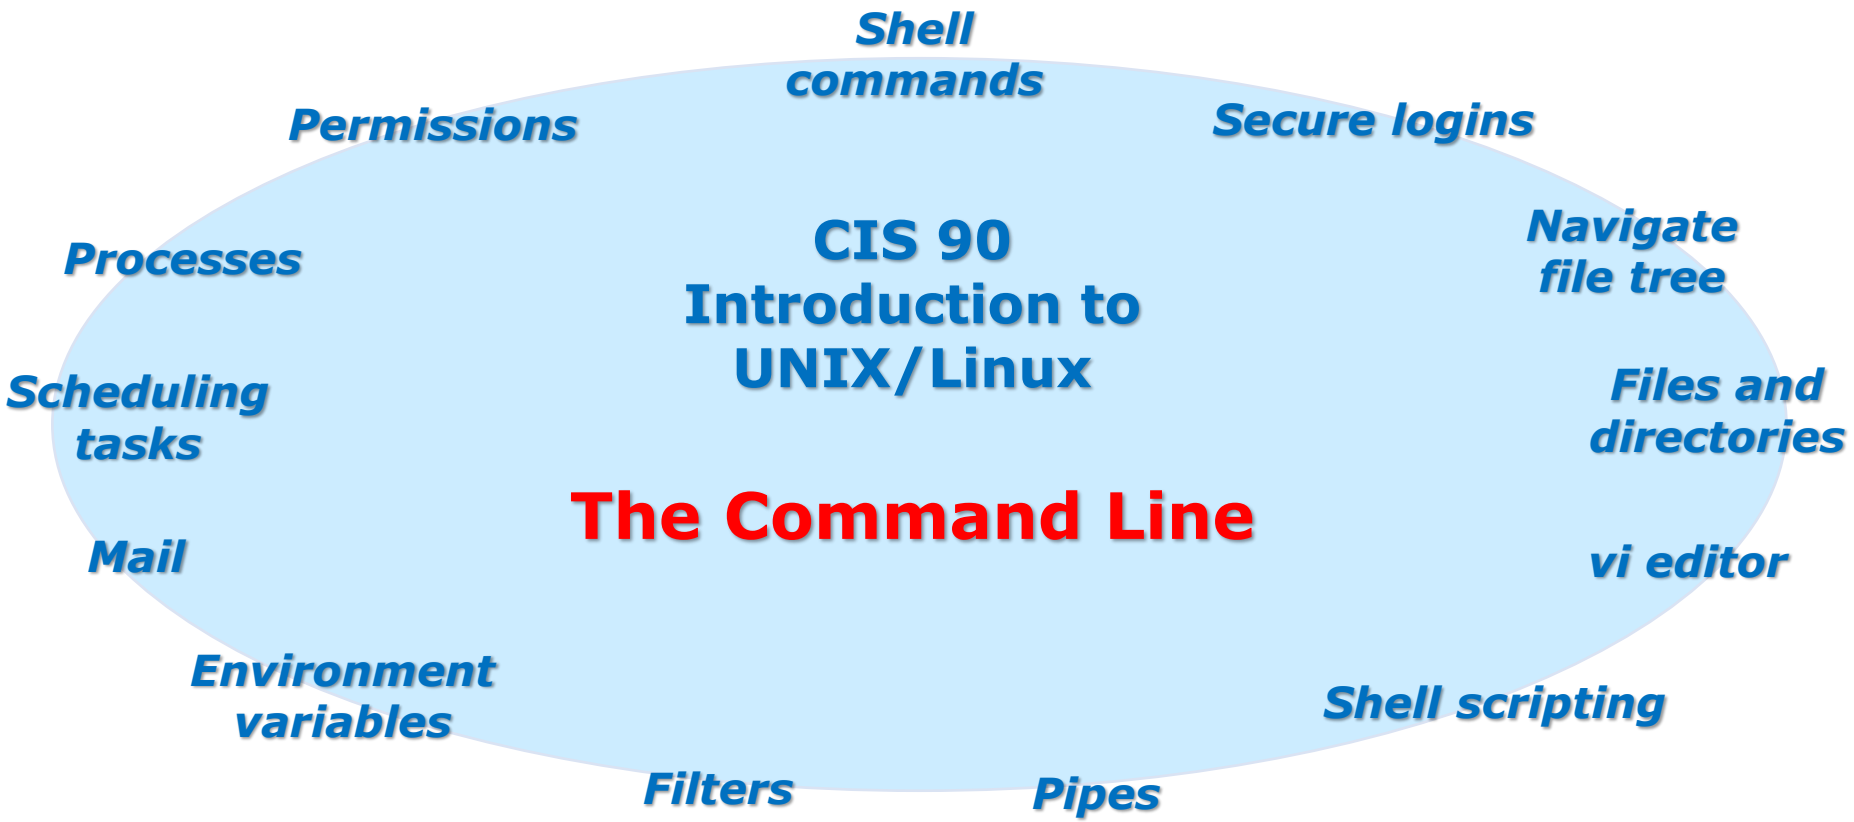
- ❑ Slides and lab posted
- ❑ Print out agenda slide and annotate page numbers

- ❑ Flash cards
- ❑ 1st minute quiz
- ❑ Calendar page updated

- ❑ Lab 9 tested and uploaded
- ❑ Test 2 stats run
- ❑ Test and schedule langs file email for Lab 9 ready (at end of class)
- ❑ Schedule lock/unlock turnin directory (scripts/schedule-submit-locks)
- ❑ Apache configured for student websites
  - ❑ /etc/httpd/conf.d/userdir.conf
    - ❑ UserDir directive
  - ❑ systemctl restart httpd
  - ❑ setsebool -P httpd_enable_homedirs true
  - ❑ chcon -R -t httpd_sys_content_t cis90_html
- ❑ Swap all egg & treat slides in shell six steps

- ❑ Backup slides, CCC info, handouts on flash drive
- ❑ Spare 9v battery for mic
- ❑ Key card for classroom door

- ❑ https://zoom.us
- ❑ Putty + Slides + Chrome
- ❑ Enable/Disable attendee sharing
  ^ > Advanced Sharing Options > Only Host
- ❑ Enable/Disable attended annotations
  Share > More > Disable Attendee Sharing



Student Learner Outcomes

1. Navigate and manage the UNIX/Linux file system by viewing, copying, moving, renaming, creating, and removing files and directories.
2. Use the UNIX features of file redirection and pipelines to control the flow of data to and from various commands.
3. With the aid of online manual pages, execute UNIX system commands from either a keyboard or a shell script using correct command syntax.

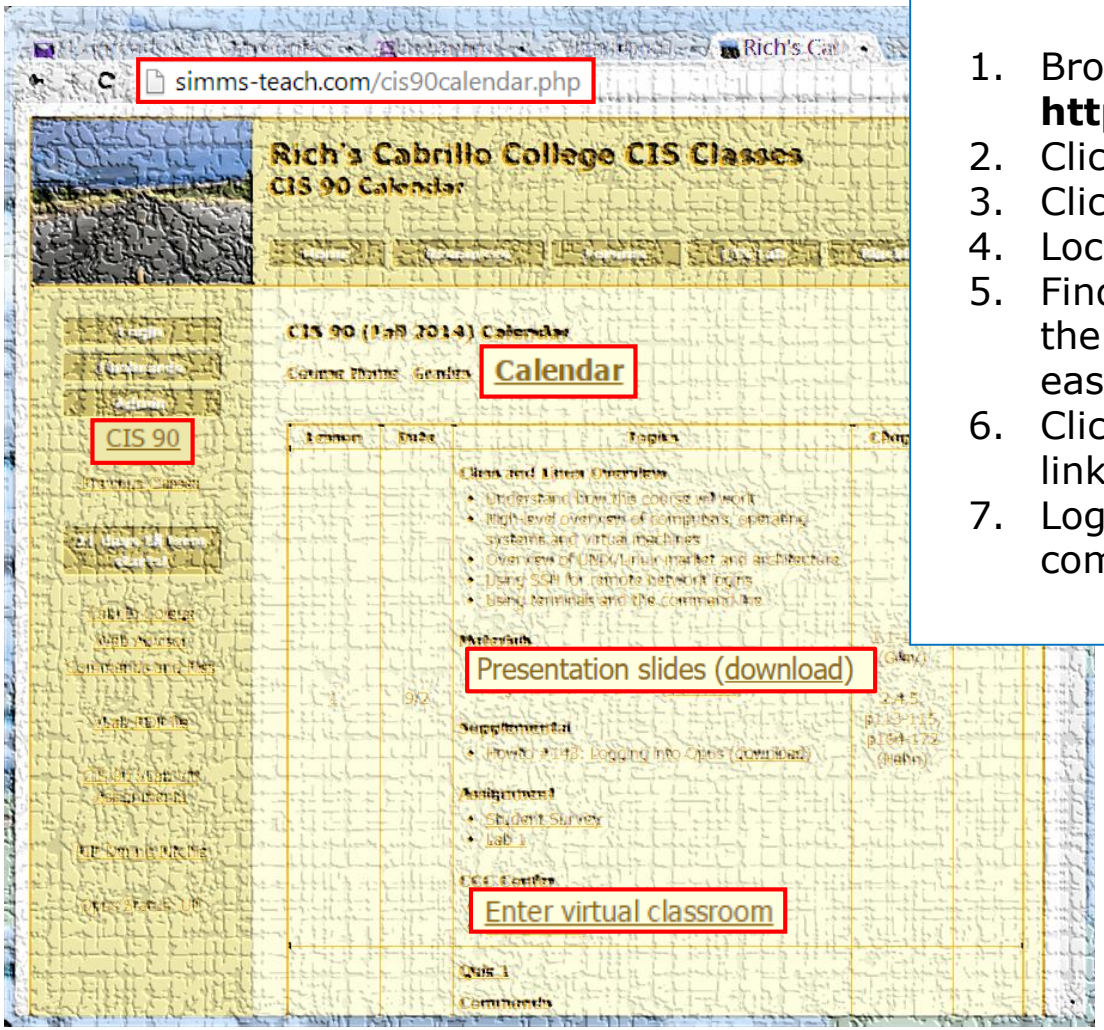
Introductions and Credits

Jim Griffin
- Created this Linux course
- Created Opus and the CIS VLab
- Jim's site: http://cabrillo.edu/~jgriffin/

Rich Simms
- HP Alumnus
- Started teaching this course in 2008 when Jim went on sabbatical
- Rich's site: http://simms-teach.com

And thanks to:
- John Govsky for many teaching best practices: e.g. the First Minute quizzes, the online forum, and the point grading system (http://teacherjohn.com/)

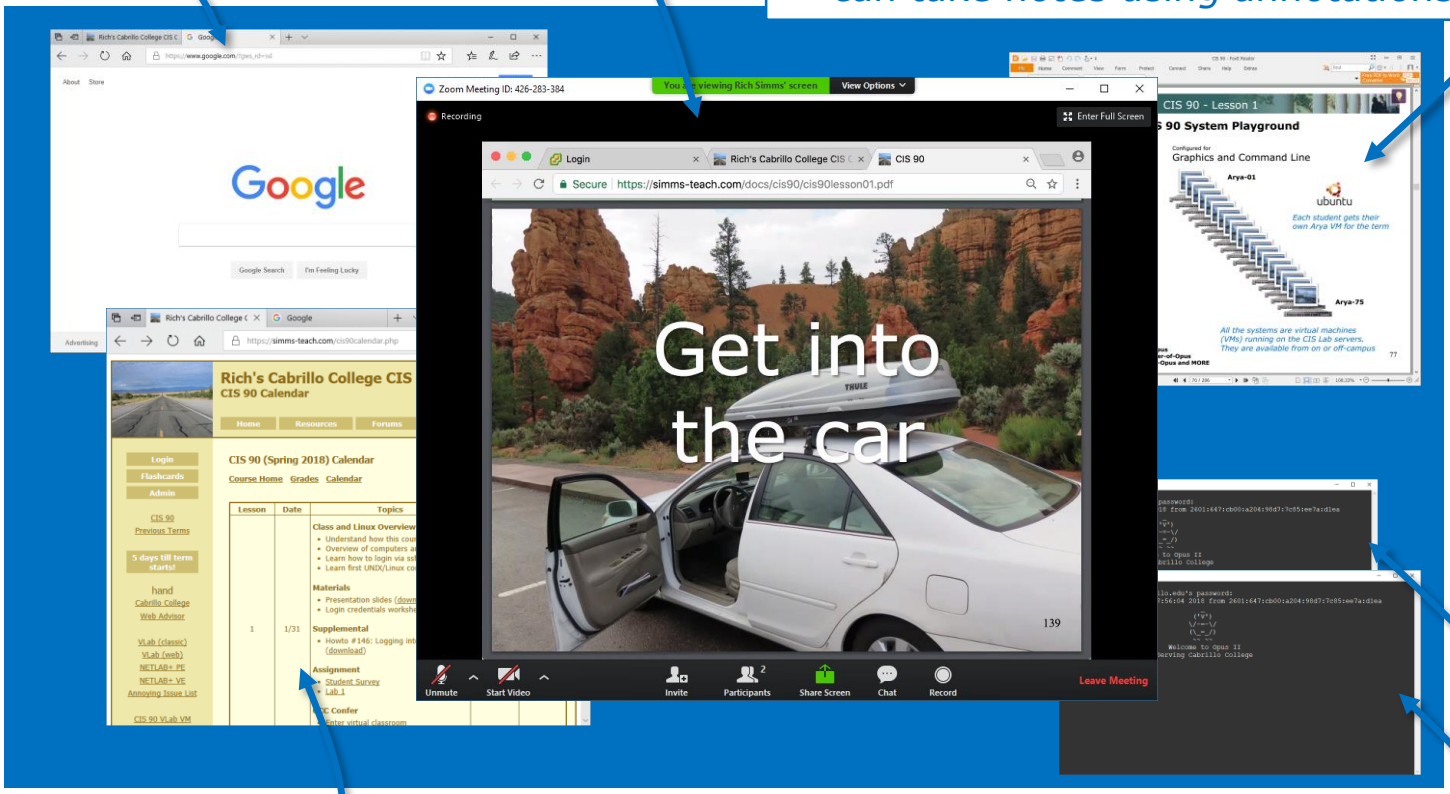
Student checklist - Before class starts



1. Browse to: **http://simms-teach.com**
2. Click the **CIS 90** link.
3. Click the **Calendar** link.
4. Locate today's lesson.
5. Find the **Presentation slides** for the lesson and **download** for easier viewing.
6. Click the **Enter virtual classroom** link to join ConferZoom.
7. Log into Opus-II with Putty or ssh command.

Student checklist - Before class starts

- ❑ *Google*
- ❑ *ConferZoom*
- ❑ *Downloaded PDF of Lesson Slides. I like Foxit Reader so I can take notes using annotations.*



- ❑ *CIS 90 website Calendar page*
- ❑ *One or more login sessions to Opus-II*

Questions

Questions?

Lesson material?

Labs? Tests?

How this course works?

- Graded work in home directories
- Answers in /home/cis90/answers

Who questions much, shall learn much, and retain much.
- Francis Bacon

If you don't ask, you don't get.
- Mahatma Gandhi

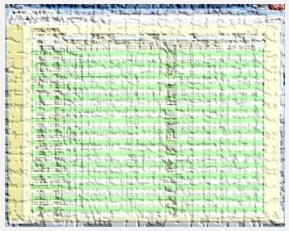
Chinese Proverb	他問一個問題，五分鐘是個傻子，他不問一個問題仍然是一個傻瓜永遠。 *He who asks a question is a fool for five minutes; he who does not ask a question remains a fool forever.*

Where to find your grades

Send me your survey to get your LOR code name.

The CIS 90 website Grades page

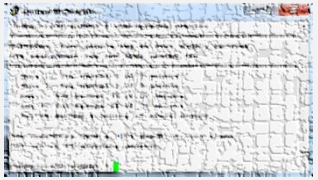
http://simms-teach.com/cis90grades.php



Or check on Opus-II

checkgrades *codename*

(where codename is your LOR codename)



Written by Jesse Warren a past CIS 90 Alumnus

Percentage	Total Points	Letter Grade	Pass/No Pass
90% or higher	504 or higher	A	Pass
80% to 89.9%	448 to 503	B	Pass
70% to 79.9%	392 to 447	C	Pass
60% to 69.9%	336 to 391	D	No pass
0% to 59.9%	0 to 335	F	No pass

At the end of the term I'll add up all your points and assign you a grade using this table

Points that could have been earned:

7 quizzes:	21 points
7 labs:	210 points
2 tests:	60 points
2 forum quarters:	40 points
Total:	**331 points**

Extra Credit

On the forum

Be sure to monitor the forum as I may post extra credit opportunities without any other notice!

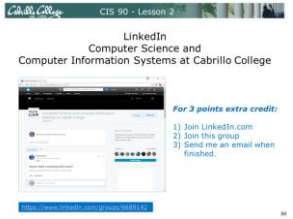
On some labs

Extra credit (2 points)

For a small taste of what you would learn in CIS 191 let's add a new user to your Arya VM. Once added we will see how the new account is represented in */etc/passwd* and */etc/shadow*.

1. Log into your Arya VM as the cis90 user. Make sure it's your VM and not someone else's.
2. Install the latest updates:
   ```
   sudo apt-get update
   sudo apt-get upgrade
   ```
3. Add a new user account for yourself. You may make whatever username you wish. The example below shows how Benji would make the same username he uses on Opus:
   ```
   sudo useradd -G sudo -c "Benji Simms" -m -s /bin/bash simben90
   ```

In lesson slides (search for extra credit)

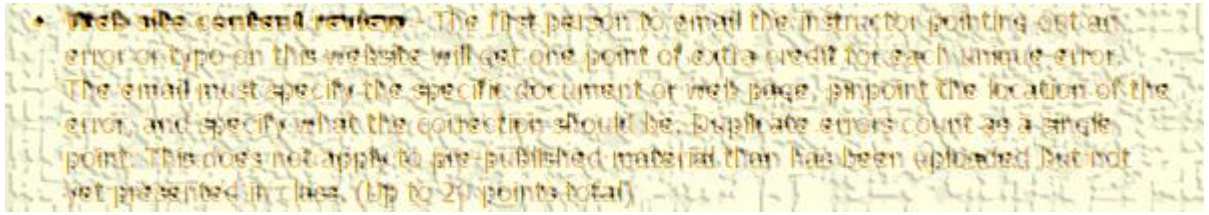


On the website

http://simms-teach.com/cis90grades.php

For some flexibility, personal preferences or family emergencies there is an additional 90 points available of **extra credit** activities.

http://simms-teach.com/cis90extracredit.php



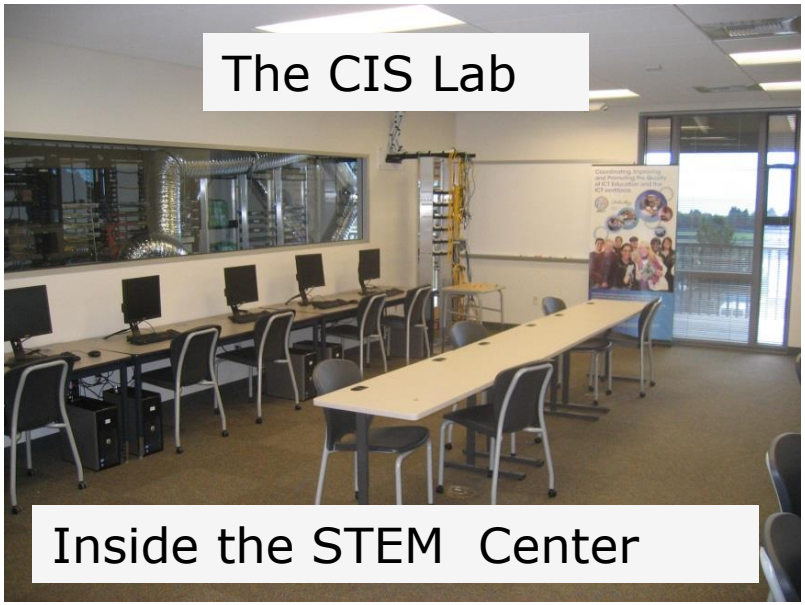
Getting Help When Stuck on a Lab Assignment

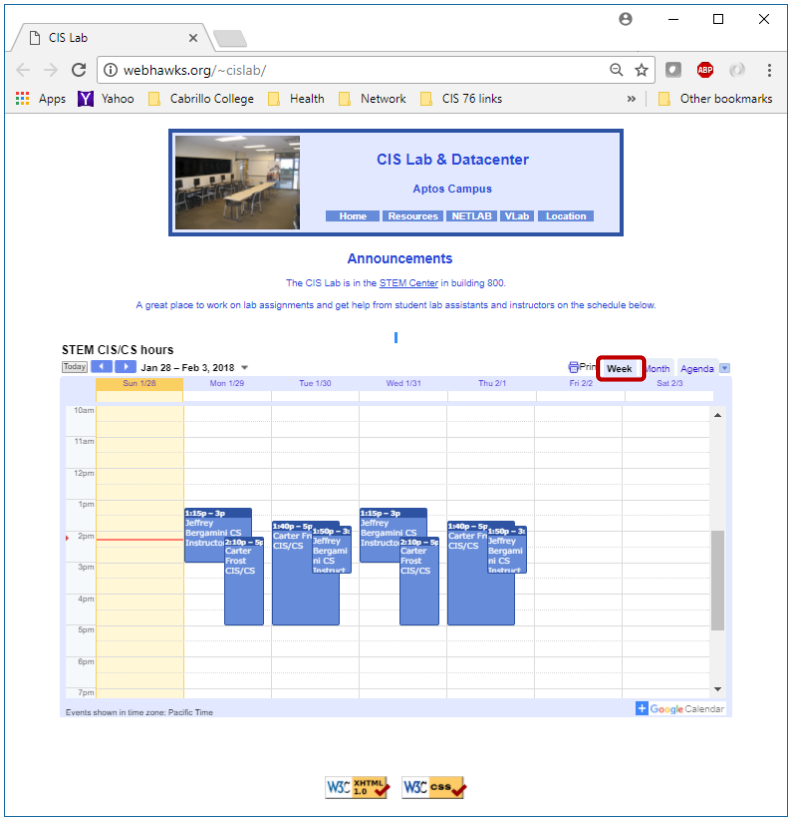
- Google the topic/error message.
- Search the Lesson Slides (they are PDFs) for a relevant example on how to do something.
- Post a question on the forum. Explain what you are trying to do and what you have tried so far.
- Talk to a STEM center tutor/assistant.
- Come see me during my office or lab hours. I will be in the CTC (room 1403) every Wednesday afternoon from 3-5:30.
- Make use of the Open Questions time at the start of every class.
- Make a cheat sheet of commands and examples so you never again get stuck on the same thing!

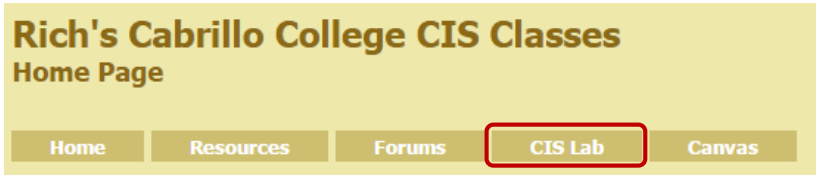
Expect to do a LOT of troubleshooting in this course!

Help Available in the CIS Lab

Instructors, lab assistants and equipment are available for CIS students to work on assignments.







To see schedule, click the CIS Lab link on the website and use the "Week" calendar view

CTC - Building 1400
On lower campus

I will be in the CTC (room 1403) every Wednesday afternoon from 3-5:30

The slippery slope

1) If you didn’t submit the last lab ...
2) If you were in class and didn’t submit the last quiz ...
3) If you didn’t send me the student survey assigned in Lesson 1 ...
4) If you haven't made a forum post in the last quarter of the course ...

Please contact me by email, see me during my office hours or when I'm in the CTC

Email: risimms@cabrillo.edu

Test 2 Post Mortem

Test 2 – Results

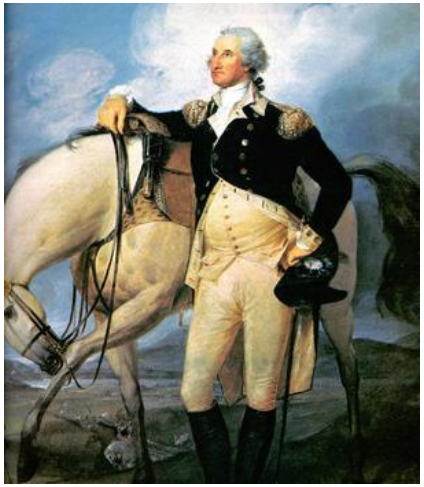
Extra Credit
Missed Q33 = 20
Missed Q31 = 18
Missed Q32 = 15

For correct answers see test02.graded files in your home directory

White Horse

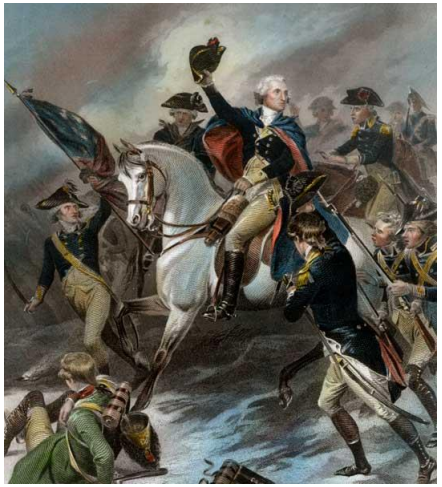
Q16) There is a file in the */etc* directory named *passwd*. This file has information on all user accounts including usernames, UIDs, first and last name, etc. What is the absolute pathname of this file?

Correct answer: /etc/passwd



http://www.sodahead.com/united-states/what-color-was-george-washingtons-white-horse/question-636725/

http://kids.britannica.com/comptons/art-55428/General-George-Washington-and-his-staff-welcoming-a-provision-train



http://www.mountvernon.org/content/revolutionary-war-princeton-white-horse

Optional Test #2 Online Workshop

Time: Sunday April 22, 2PM till whenever
Place: The CIS 90 Zoom Classroom

If you are interested and think you might attend use the chat window to let me know.

Housekeeping

Overlap Students

Don't forget to update the Google Docs Log when watching the recording

1. Lab 8 due tonight

Don't wait till midnight tonight to see if this worked! Submit with an earlier time.

```
at 11:59pm
at> cat files.out bigshell > lab08
at> cp lab08 /home/rsimms/turnin/cis90/lab08.$LOGNAME
at> <Ctrl-D>
```

2. A **check8** script is available for Lab 8.

3. Read your email on Opus to verify your Lab 8 submission was received AND that you did not submit an empty file!

4. Note: Lab 9 and five posts due next week.

grep workout

Some perfect times to use the **grep** command:

1) To search through the output of a command for some text

```
command | grep "text string"
```

2) To search inside one or more files for some text

```
grep "text string" file1 file2 … fileN
```

3) To search (recursively) inside all files in a branch of the UNIX file tree for some text

```
grep –R "text string" directory
```

grep usage – search output of a command

Is the CUPS daemon (print service) running right now?

```
/home/cis90/simben $ ps -ef | grep cups
root      1323     1  0 Jan21 ?        00:00:24 /usr/sbin/cupsd -f
simben90  6361  3202  0 11:26 pts/1    00:00:00 grep --color=auto cups
```

Yes it is, with PID=1323

grep practice

Is the cronjob daemon (**crond**) running right now?

If so, type the crond PID into the chat window

grep usage – search output of a command

Is the Apache web server (httpd) installed?

This shows all installed package names

This searches for package names containing "httpd"

```
/home/cis90/simben $ rpm -qa | grep httpd
httpd-2.4.6-67.el7.centos.6.x86_64
httpd-tools-2.4.6-67.el7.centos.6.x86_64
```

Yes, version 2.4.6 has been installed

```
/home/cis90/simben $ httpd -v
Server version: Apache/2.4.6 (CentOS)
Server built:   Oct 19 2017 20:39:16
```

grep practice

Which relational DBMS (Database Management System) is installed on Opus-II?

MySQL
PostgreSQL
MariaDB

Put the name and version in the chat window

FYI, this DBMS is used by the Forum

grep usage – search output of a command

When were the last 5 times I logged in?

```
/home/cis90/simben $ last | grep $LOGNAME | head -n5
simben90 pts/0        50-0-68-235.dsl. Mon Apr 23 05:39   still logged in
simben90 pts/6        10.64.25.2       Wed Apr 18 12:48 - 16:51  (04:02)
simben90 pts/5        10.64.25.2       Wed Apr 18 12:48 - 16:51  (04:02)
simben90 pts/4        10.64.25.2       Wed Apr 18 12:48 - 16:51  (04:03)
simben90 pts/1        50-0-68-235.dsl. Wed Apr 18 09:06 - 10:23  (01:17)
```

This scans the latest wtmp log file and lists your most recent five logins to Opus-II

grep practice

For the time period covered by the current wtmp log file. What was the date of your earliest login?

Type your earliest login date into the chat window

grep usage – search output of a command

```
[rsimms@oslab ~]$ ls /bin/{bash,sh,ksh,csh,tcsh}
/bin/bash  /bin/csh  /bin/ksh  /bin/sh  /bin/tcsh

[rsimms@oslab ~]$ ksh
$ sh
sh-4.2$ csh
```

Look familiar? (lab 8) Shows how to compare shells by size and record the biggest one in a file.

size

```
[rsimms@oslab ~]$ ps -l
F S   UID   PID  PPID  C PRI  NI ADDR SZ WCHAN  TTY          TIME CMD
4 S  1201  9483  9476  0  80   0 - 28881 do_wai pts/1    00:00:00 bash
0 S  1201  9533  9483  0  80   0 - 29280 do_wai pts/1    00:00:00 ksh
0 S  1201  9557  9533  0  80   0 - 28847 do_wai pts/1    00:00:00 sh
0 S  1201  9561  9557  0  80   0 - 29876 sigsus pts/1    00:00:00 csh
0 R  1201  9771  9561  0  80   0 - 37235 -      pts/1    00:00:00 ps

[rsimms@oslab ~]$ ps -l | grep csh
0 S  1201  9561  9557  0  80   0 - 29876 sigsus pts/1    00:00:00 csh

[rsimms@oslab ~]$ ps -l | grep csh > bigshell

[rsimms@oslab ~]$ cat bigshell
0 S  1201  9561  9557  0  80   0 - 29876 sigsus pts/1    00:00:00 csh
```

grep practice

Instructor note:
Login directly to simben90 (don't su)
Give write permission to others on Benji's terminal device: ***chmod 0+w $(tty)***

- Run **bash**, **ksh**, **sh** and **csh** shells and use **ps -l** to see which is the smallest.
- Redirect the line of **ps -l** output for the smallest shell to Benji Simms's terminal: **/dev/pts/??**
- Sign it with **echo "From *first name*" > /dev/pts/??**
- Then **exit** each shell till your are back to just one bash shell running.

grep usage – search inside files

How many CIS 90 user accounts are there?

```
/home/cis90/simben $ grep :1090: /etc/passwd | wc -l
36

/home/cis90/simben $ grep cis90 /etc/passwd | wc -l
36

/home/cis90/simben $ grep "^.*90" /etc/passwd | wc -l
36
```

There are 36

The third example is a "regular expression". For more information see the Resources page of the website.

grep practice

How many CIS 76 accounts are there on Opus-II?

Type the number of CIS 76 accounts into the chat window

grep usage – search inside files

Example: What is my account information in /etc/passwd?

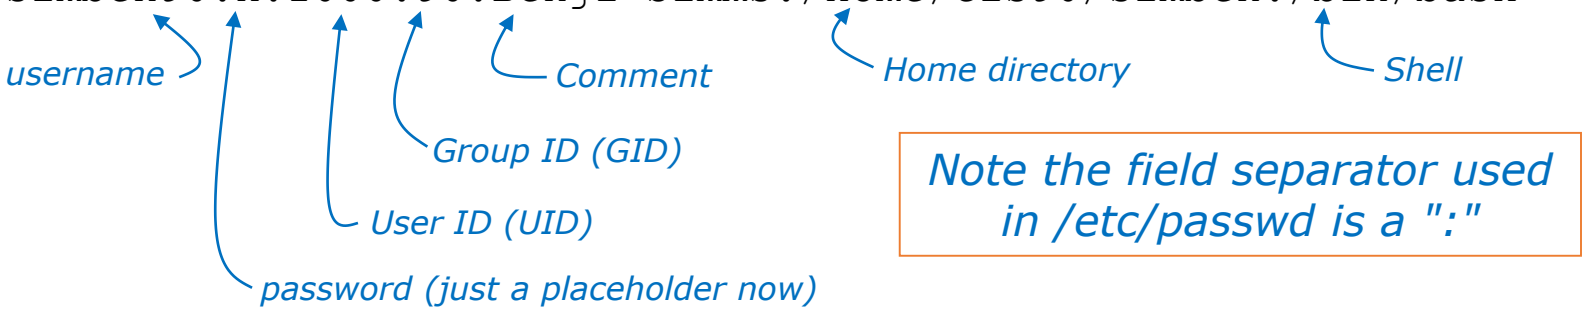
```
/home/cis90/simben $ grep $LOGNAME /etc/passwd
simben90:x:1000:90:Benji Simms:/home/cis90/simben:/bin/bash
```

or

```
/home/cis90/simben $ grep simben90 /etc/passwd
simben90:x:1000:90:Benji Simms:/home/cis90/simben:/bin/bash
```

or

```
/home/cis90/simben $ cat /etc/passwd | grep $LOGNAME
simben90:x:1000:90:Benji Simms:/home/cis90/simben:/bin/bash
```



Note the field separator used in /etc/passwd is a ":"

grep practice

Does your user ID in */etc/passwd* match the uid output by the **id** command?

*Type your answer (yes or no) and your uid from the **id** command into the chat window*

grep usage – search inside files in all or part of the file tree

All the system configuration files are in the /etc directory

Where does the system set your "prompt" variable?

```
/home/cis90/simben $ grep -r "PS1=" /etc 2> /dev/null
/etc/bashrc:   [ "$PS1" = "\\s-\\v\\\$ " ] && PS1="[\u@\h \W]\\$ "
/etc/bashrc:   #   PS1="[\u@\h:\l \W]\\$ "
```

It is set more than once during login. We will learn in a future lesson that the one in .bash_profile is done last and is what you end up using.

```
/home/cis90/simben $ grep PS1= .bash_profile
PS1='$PWD $ '
```

grep practice

Find the file in the */usr/share* portion of the file tree that contains "playing hot potato".

Type the absolute pathname of the file in the chat window.

Shell
Six Steps
(REVIEW)

Example Command

This is Benji's home directory

```
/home/cis90/simben $ ls -F
1968.egg  class/       edits/     fun/      lab01-collection  log      redhat/
africa/   dead.letter  errors     Hidden/   lab02-collection  mbox     sawyer
Apple/    debian/      etc/       HP/       lab04-mydata      misc/    slackware/
basket/   Dell/        f1.graded  island/   lesson7/          mylog    stuff
bigfile   Directory3/  f2.graded  jobs/     letter            normal   uhistory
bin/      docs/        five       L7-fun/   letter.bak        poems/
/home/cis90/simben $
```

Benji wants to find some eggs and types this command

```
/home/cis90/simben $ find / -name *egg 2> /dev/null
```

Write what you think will happen in the chat window

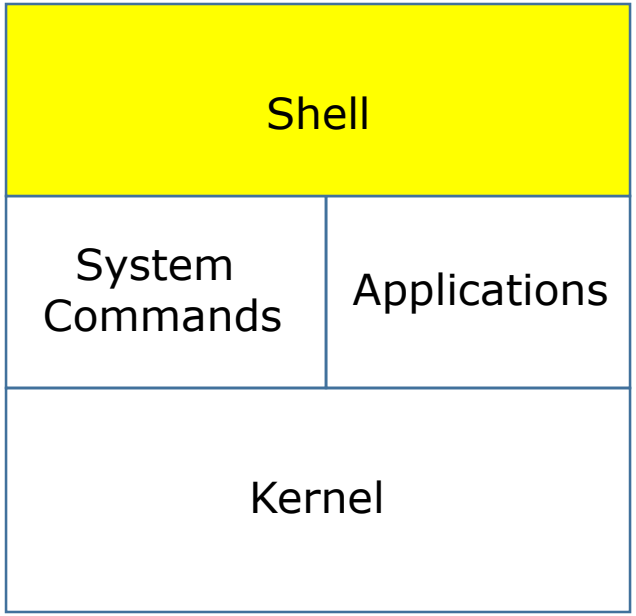
Example Command

```
/home/cis90/simben $ find / -name *egg 2> /dev/null
/home/cis90/bomnic/1968.egg
/home/cis90/cis/1968.egg
/home/cis90/cormax/1968.egg
/home/cis90/jorwes/1968.egg
/home/cis90/bownic/1968.egg
/home/cis90/rodduk/1968.egg
/home/cis90/tosbre/1968.egg
/home/cis90/jordan/basket/1968.egg
/home/cis90/tinsam/1968.egg
/home/cis90/milhom/1968.egg
/home/cis90/bancar/1968.egg
< snipped >
/home/cis90/miljac/1968.egg
/home/cis90/stejad/basket/1968.egg
/home/cis90/simben/1968.egg
/home/cis90/hunbra/1968.egg
/home/cis90/specod/1968.egg
/home/cis90/temtyl/1968.egg
/home/cis90/watshe/1968.egg
/home/cis90/hawjus/1968.egg
/home/cis90/simreb/basket/1968.egg
/home/cis90/seasky/1968.egg
/home/cis90/brinic/1968.egg
/home/cis90/simben $
```

Note: Only the 1968.egg files were found!

*That's because Benji has a file named 1968.egg in his home directory and the shell replaced *egg with 1968.egg.*

Prompt Step



1) **Prompt**
2) Parse
3) Search
4) Execute
5) Nap
6) Repeat

Prompt Step
(uses PS1 variable)

```
/home/cis90/simben $
```

bash using your PS1 variable creates and outputs your prompt which is written to your terminal device

- Benji is using the bash shell. There are many other shells such as sh, ksh and csh. In */etc/passwd* the last field in the line for his account determines the shell that is run when logging in.

```
/home/cis90/simben $ grep $LOGNAME /etc/passwd
simben90:x:1001:190:Benji Simms:/home/cis90/simben:/bin/bash
```

- The bash program resides in the */bin* directory.

```
/home/cis90/simben $ ls -l /bin/bash
-rwxr-xr-x. 1 root root 874248 May 10  2012 /bin/bash
```

- The command prompt appearance is defined by the PS1 variable. You can output a prompt yourself using **echo $PS1**

```
/home/cis90/simben $ echo $PS1
$PWD $
/home/cis90/simben $ echo $PWD $
/home/cis90/simben $
/home/cis90/simben $
```

Prompt Step

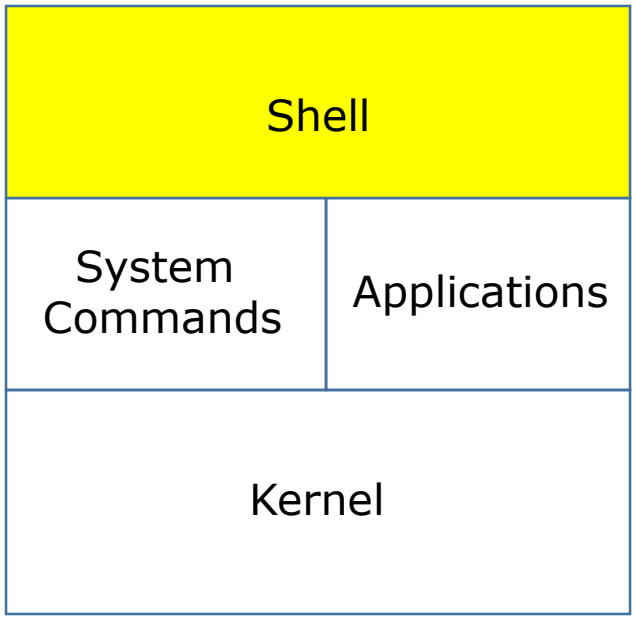
Note there is an invisible <newline> metacharacter at the end of the command

```
/home/cis90/simben $ find / -name *egg 2> /dev/null
```

Benji types this find command in response to the shell prompt

The prompt step is not complete until the user type the Enter/Return key

Parse Step



1) Prompt
2) **Parse**
3) Search
4) Execute
5) Nap
6) Repeat

Parse Step

The shell uses spaces to separate options, arguments and redirection

```
find / -name *egg 2> /dev/null
```

The shell must expand filename expansion characters and variables during the parse step. Note there is an invisible <newline> metacharacter at the end of the command

Parsing RESULTS:

Command: **find**

Options and arguments:
- **/**
- **-name**
- **1968.egg**

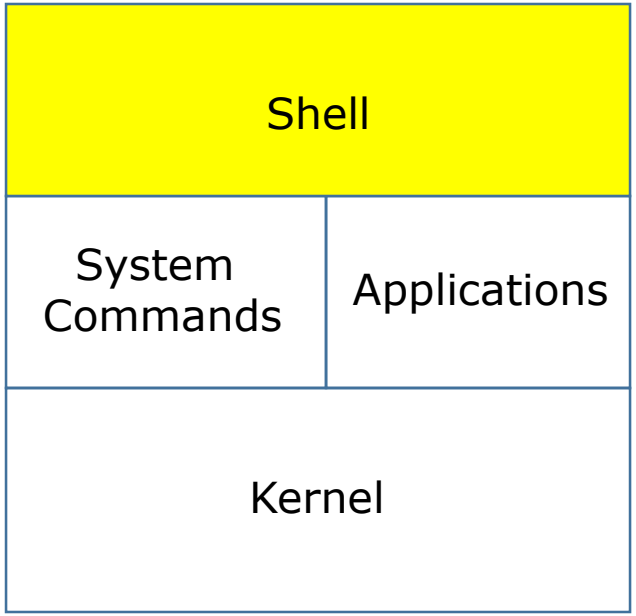
This will be passed to the command (if the command can be located on the path)

Redirection:
- Connect **stderr** to **/dev/null** (the "bit bucket")

This will be handled by the shell. The command, if loaded, will not see this

*Note: Because Benji had a 1968.egg file in his home directory, the shell expands *egg to 1968.egg*

Search Step



1) Prompt
2) Parse
3) **Search**
4) Execute
5) Nap
6) Repeat

Search Step

(uses PATH variable)

Command: **find**

*The shell now must search, in order, every directory on Benji's path to locate the first occurrence of the **find** command.*

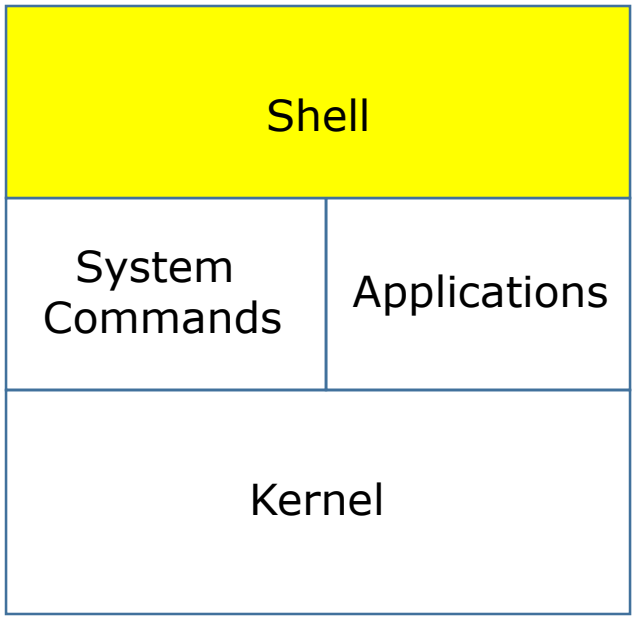
Benji's path is defined by the value of his PATH variable

1st directory searched: `/usr/local/bin`
2nd directory searched: `/usr/bin`
3rd directory searched: `/usr/local/sbin`
4th directory searched: `/usr/sbin`
5th directory searched: `/home/cis90/simben/../bin`
6th directory searched: `/home/cis90/simben/bin`
7th directory searched: `.`

The shell locates the find command in the /usr/bin directory

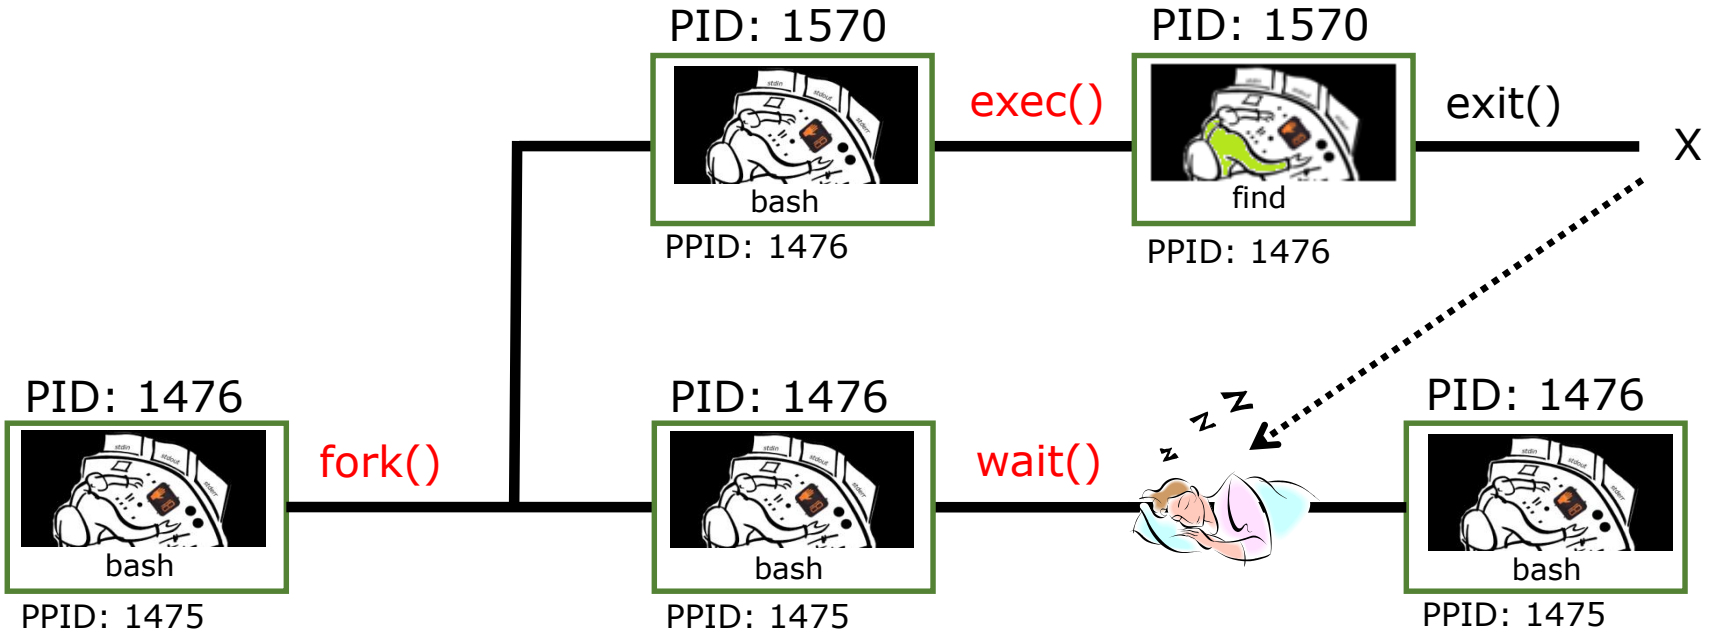
```
/home/cis90/simben $ echo $PATH
/usr/local/bin:/usr/bin:/usr/local/sbin:/usr/sbin:/home/cis90/simben/../bin:/home/cis90/simben/bin:.
/home/cis90/simben $ type find
find is /usr/bin/find
```

Execute Step



1) Prompt
2) Parse
3) Search
4) **Execute**
5) Nap
6) Repeat

Execute Step

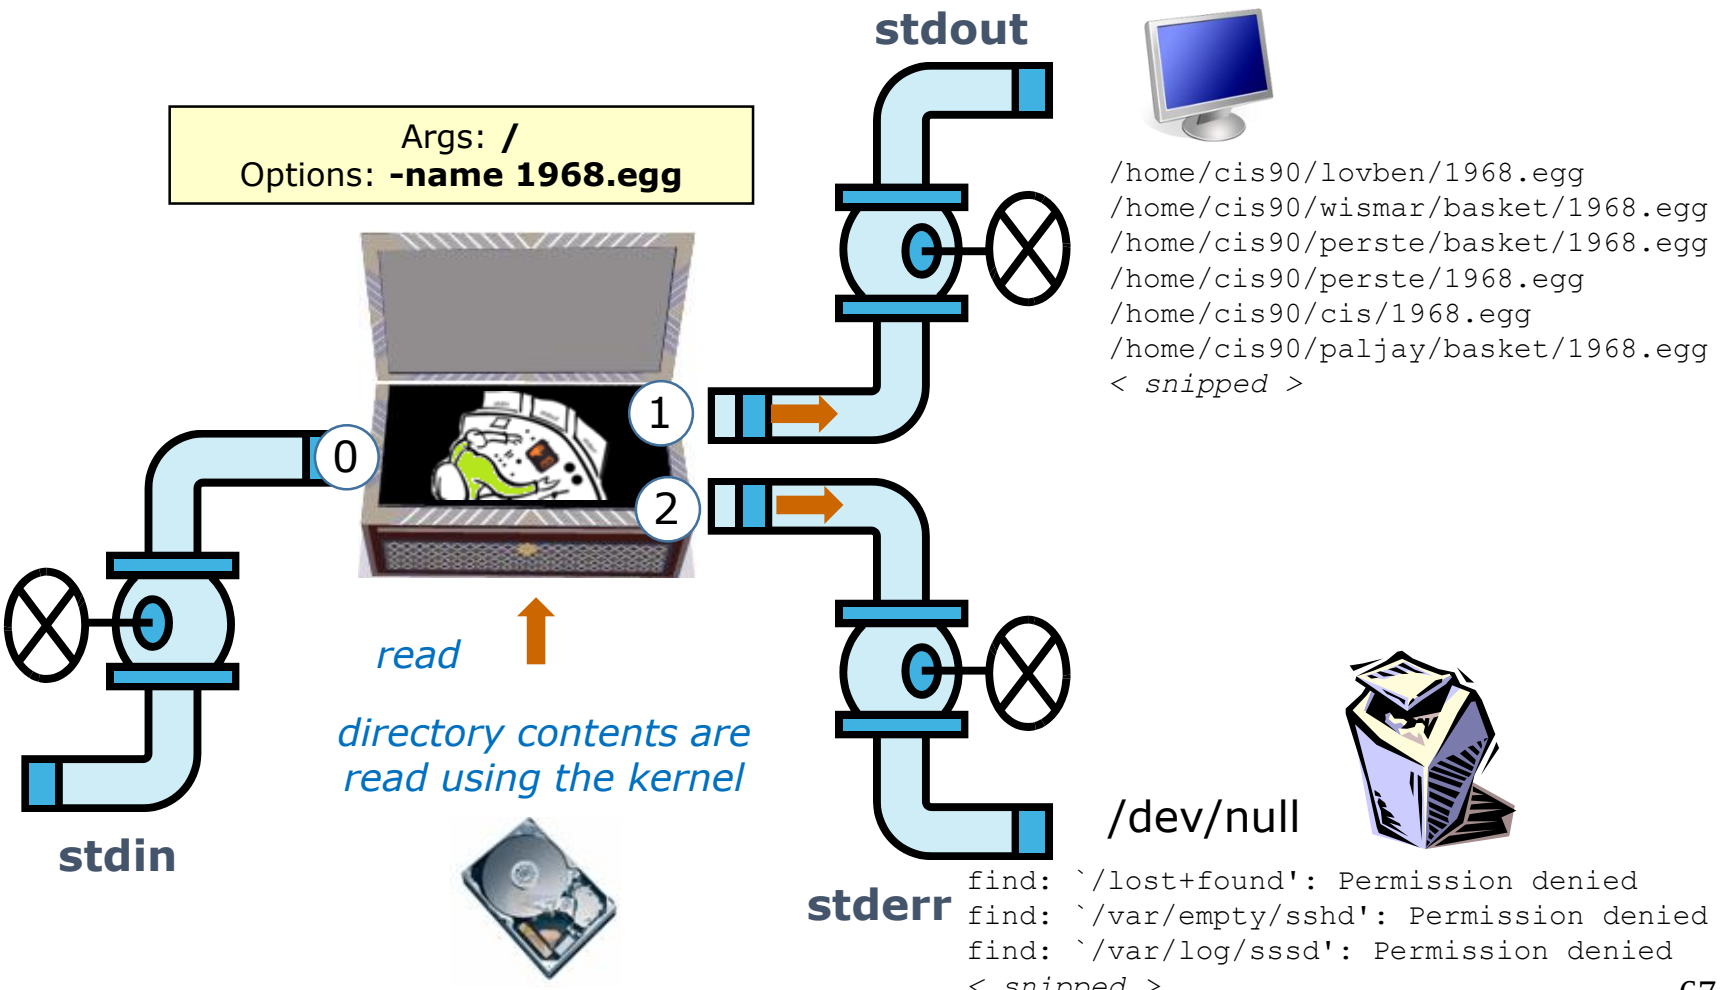


bash executes the **find** command by:

1) Cloning itself with a **fork()** system call to create a new child process.
2) With an **exec()** system call, the new child process is overlaid with the **find** code instructions.
3) bash sleeps by making a **wait()** system call while the find child process runs.
4) The child process makes an **exit()** system call when it has finished.
5) After that, the parent bash process wakes up and the child process is killed.

Execute Step

```
/home/cis90/simben $ find / -name *egg 2> /dev/null
```



This is what the find process might look like

A **process:**

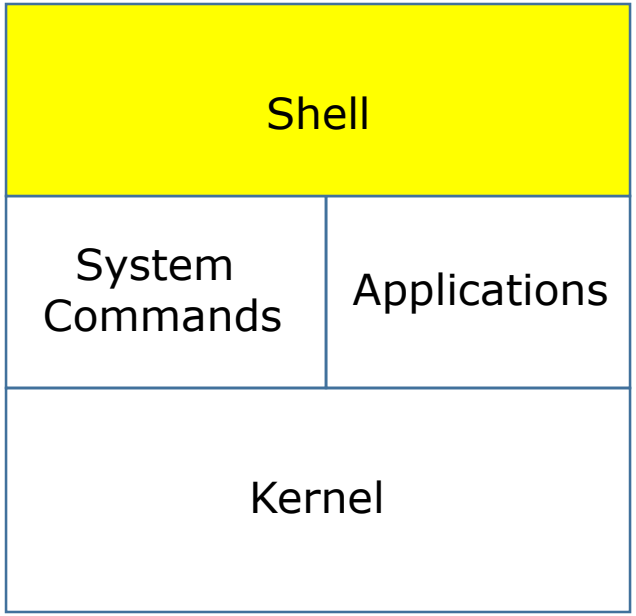
- Is provided with parsed & expanded options and arguments from the shell

- may read from **stdin**
- may write to **stdout**
- may write error messages to **stderr**

- and may get interrupted from time to time by a **signal**

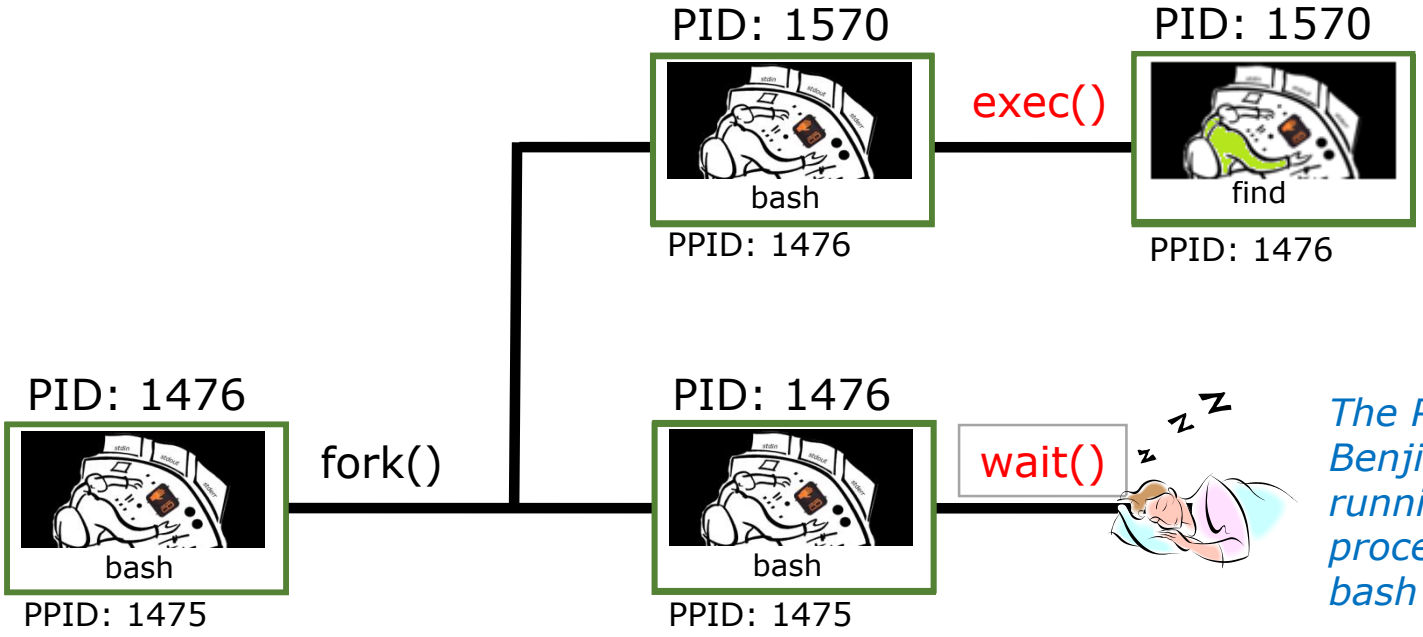
*The **find** process is running*

Nap Step



1) Prompt
2) Parse
3) Search
4) Execute
5) **Nap**
6) Repeat

Nap Step



*The PS command shows Benji's **find** command is running as a child process while the parent bash shell sleeps*

Sleeping

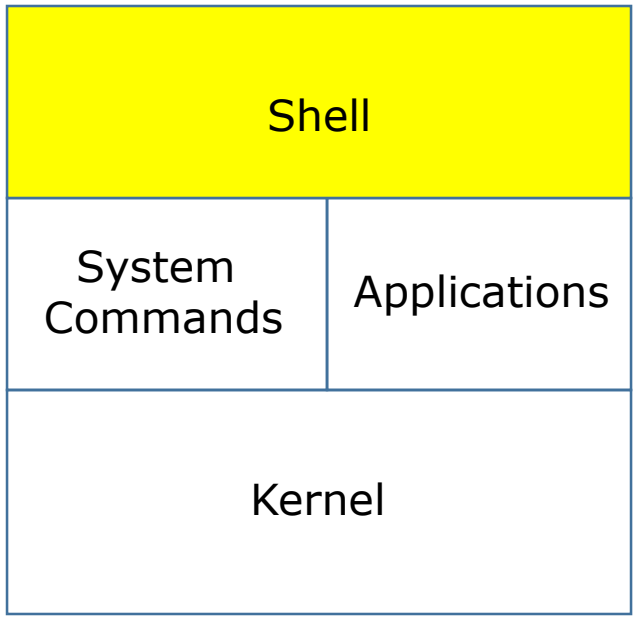
```
[rsimms@oslab ~]$ ps -l -u simben90
F S   UID   PID  PPID  C PRI  NI ADDR SZ WCHAN  TTY          TIME CMD
5 S  1001  1475  1470  0  80   0 -  3392 ?      ?        00:00:00 sshd
0 S  1001  1476  1475  0  80   0 -  1308 ?      pts/1    00:00:00 bash
0 R  1001  1570  1476 40  80   0 -  1179 ?      pts/1    00:00:00 find
```

Parent

Child

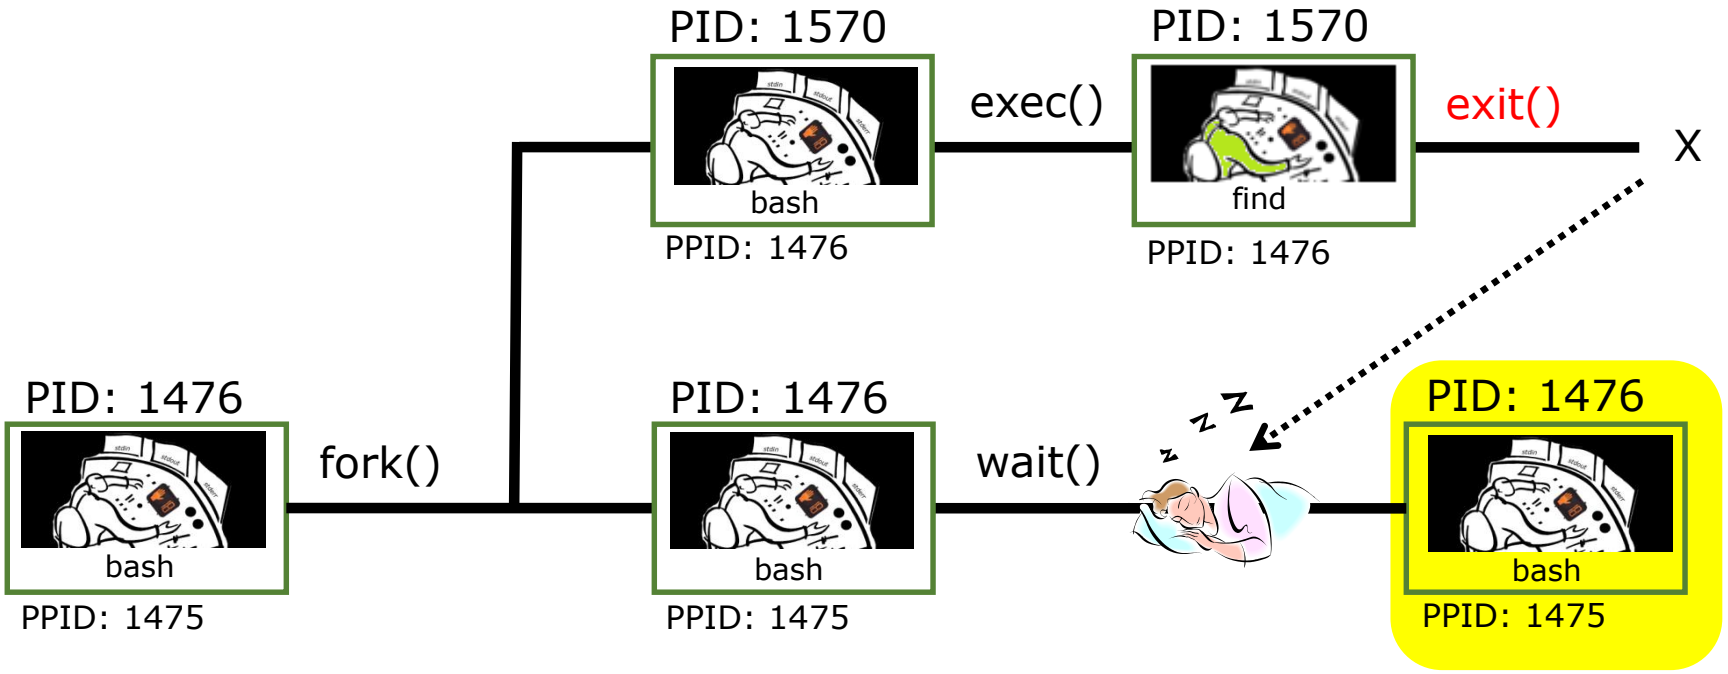
Running

Repeat Step



1) Prompt
2) Parse
3) Search
4) Execute
5) Nap
6) **Repeat**

Repeat Step



*The child process makes an **exit()** system call when it has finished. The parent bash process wakes up, the child process is killed and we are ready to start the process all over again with the next command.*

Process activity

- Start a second login session and see if you can illustrate the parent sleeping while a child runs.
- In one session run: **`grep -r "playing hot potato" /usr`**
- In the second session use repeatedly: **`ps -lu $LOGNAME`**
- The **ps** output should show "parent" bash S=Sleeping while the "child" **grep** command is either R=Running or in D=Uninterruptible sleep (IO)

```
simben90@opus-ii:~

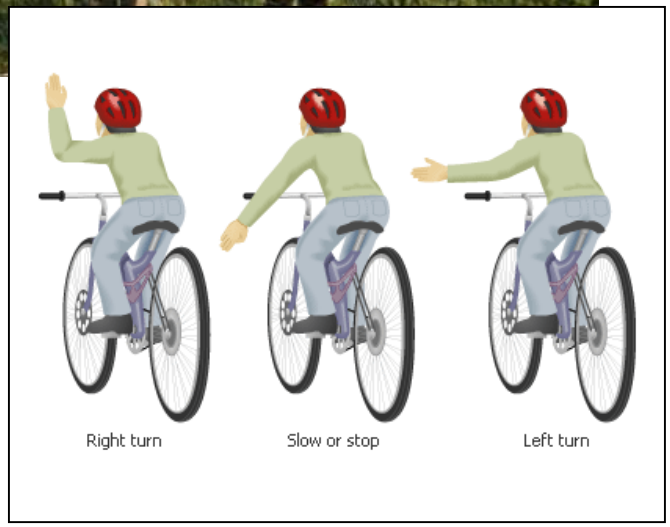
20



Right turn
Slow or stop
Left turn

This is what a process might look like

A **process:**

- Is provided with parsed/expanded options and arguments from the shell
- may read from **stdin**
- may write to **stdout**
- may write error messages to **stderr**
- and may get interrupted from time to time by a **signal**

*A **process** is a **program** that has been loaded into memory and is either running (executing instructions) or waiting to run*

Signals

The result of sending a signal to a process:

- be ignored
- default action (die)
- execute some predefined function

Signals

SIGHUP	1	Hangup (POSIX)	
SIGINT	2	Terminal interrupt (ANSI)	**Ctrl-C**
SIGQUIT	3	Terminal quit (POSIX)	**Ctrl-**
SIGILL	4	Illegal instruction (ANSI)	
SIGTRAP	5	Trace trap (POSIX)	
SIGIOT	6	IOT Trap (4.2 BSD)	
SIGBUS	7	BUS error (4.2 BSD)	
SIGFPE	8	Floating point exception (ANSI)	
SIGKILL	9	Kill (can't be caught or ignored) (POSIX)	
SIGUSR1	10	User defined signal 1 (POSIX)	
SIGSEGV	11	Invalid memory segment access (ANSI)	
SIGUSR2	12	User defined signal 2 (POSIX)	
SIGPIPE	13	Write on a pipe with no reader, Broken pipe (POSIX)	
SIGALRM	14	Alarm clock (POSIX)	
SIGTERM	15	Termination (ANSI)	

Use kill –l to see all signals

Signals

SIGSTKFLT	16	Stack fault
SIGCHLD	17	Child process has stopped or exited, changed (POSIX)
SIGCONT	18	Continue executing, if stopped (POSIX)
SIGSTOP	19	Stop executing(can't be caught or ignored) (POSIX)
SIGTSTP	20	Terminal stop signal (POSIX) **Ctrl-Z or Ctrl-F**
SIGTTIN	21	Background process trying to read, from TTY (POSIX)
SIGTTOU	22	Background process trying to write, to TTY (POSIX)
SIGURG	23	Urgent condition on socket (4.2 BSD)
SIGXCPU	24	CPU limit exceeded (4.2 BSD)
SIGXFSZ	25	File size limit exceeded (4.2 BSD)
SIGVTALRM	26	Virtual alarm clock (4.2 BSD)
SIGPROF	27	Profiling alarm clock (4.2 BSD)
SIGWINCH	28	Window size change (4.3 BSD, Sun)
SIGIO	29	I/O now possible (4.2 BSD)
SIGPWR	30	Power failure restart (System V)

Use kill –l to see all signals

Signals

Signals are asynchronous messages sent to processes

They can result in one of three courses of action:

1. be ignored,
2. default action (die)
3. execute some predefined function.

Signals are sent:

kill command

Using the kill command: **$ kill -# PID**

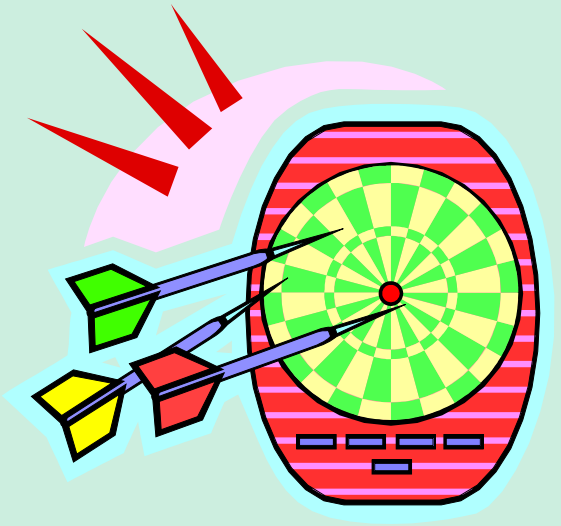
- Where # is the signal number and PID is the process id.
- if no number is specified, SIGTERM (-15) is sent.

Using special keystrokes

- limited to just a few signals
- limited to when you have control of the keyboard

Use kill –l to see all signals

Target Practice



Activity

1) Run the **annoy** program

2) Try sending it a SIGINT with **Ctrl-C**

3) Try sending it a SIGQUIT with **Ctrl-**

4) Bring up another terminal and try signals 1 through 64
   - Use **ps –u $LOGNAME** to find the **annoy** *PID*

   - Try **kill -1 *PID***
   - Try **kill -2 *PID***
   - Try **kill -3 *PID***
   - *and so forth …*

   OR

   - Try **killall -1 annoy**
   - Try **killall -2 annoy**
   - Try **killall -3 annoy**
   - *and so forth …*

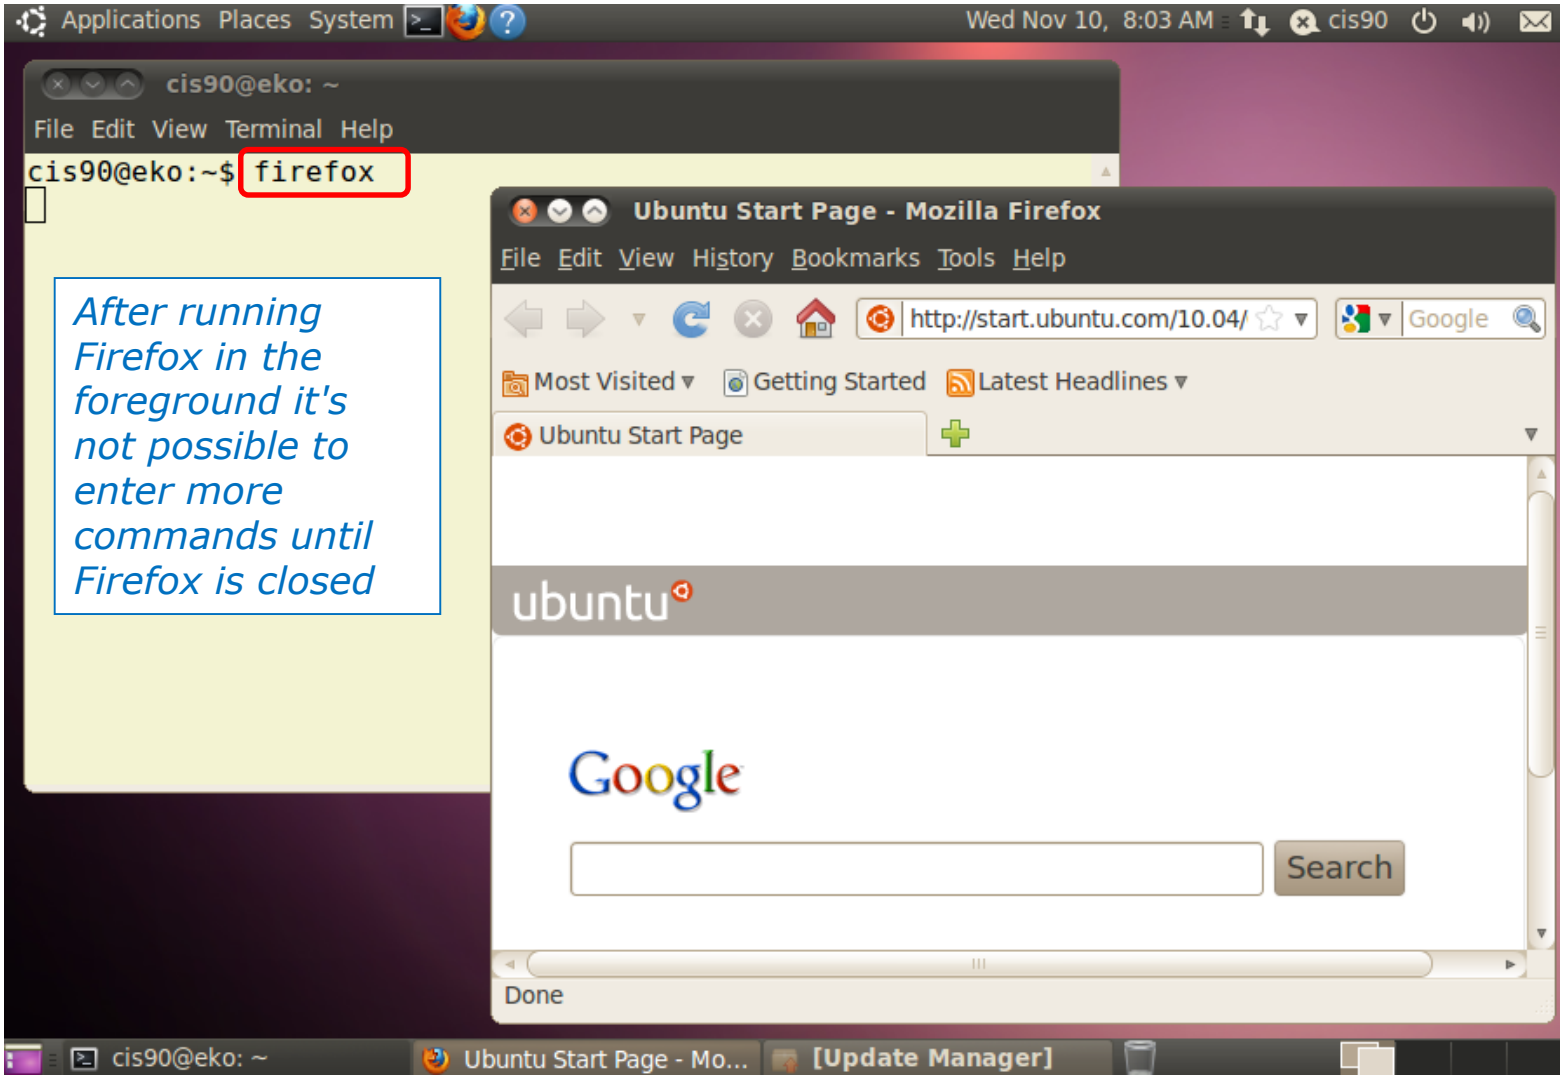
*Write the signals that kill **annoy** into the chat window*

Using &

to run a command in the background

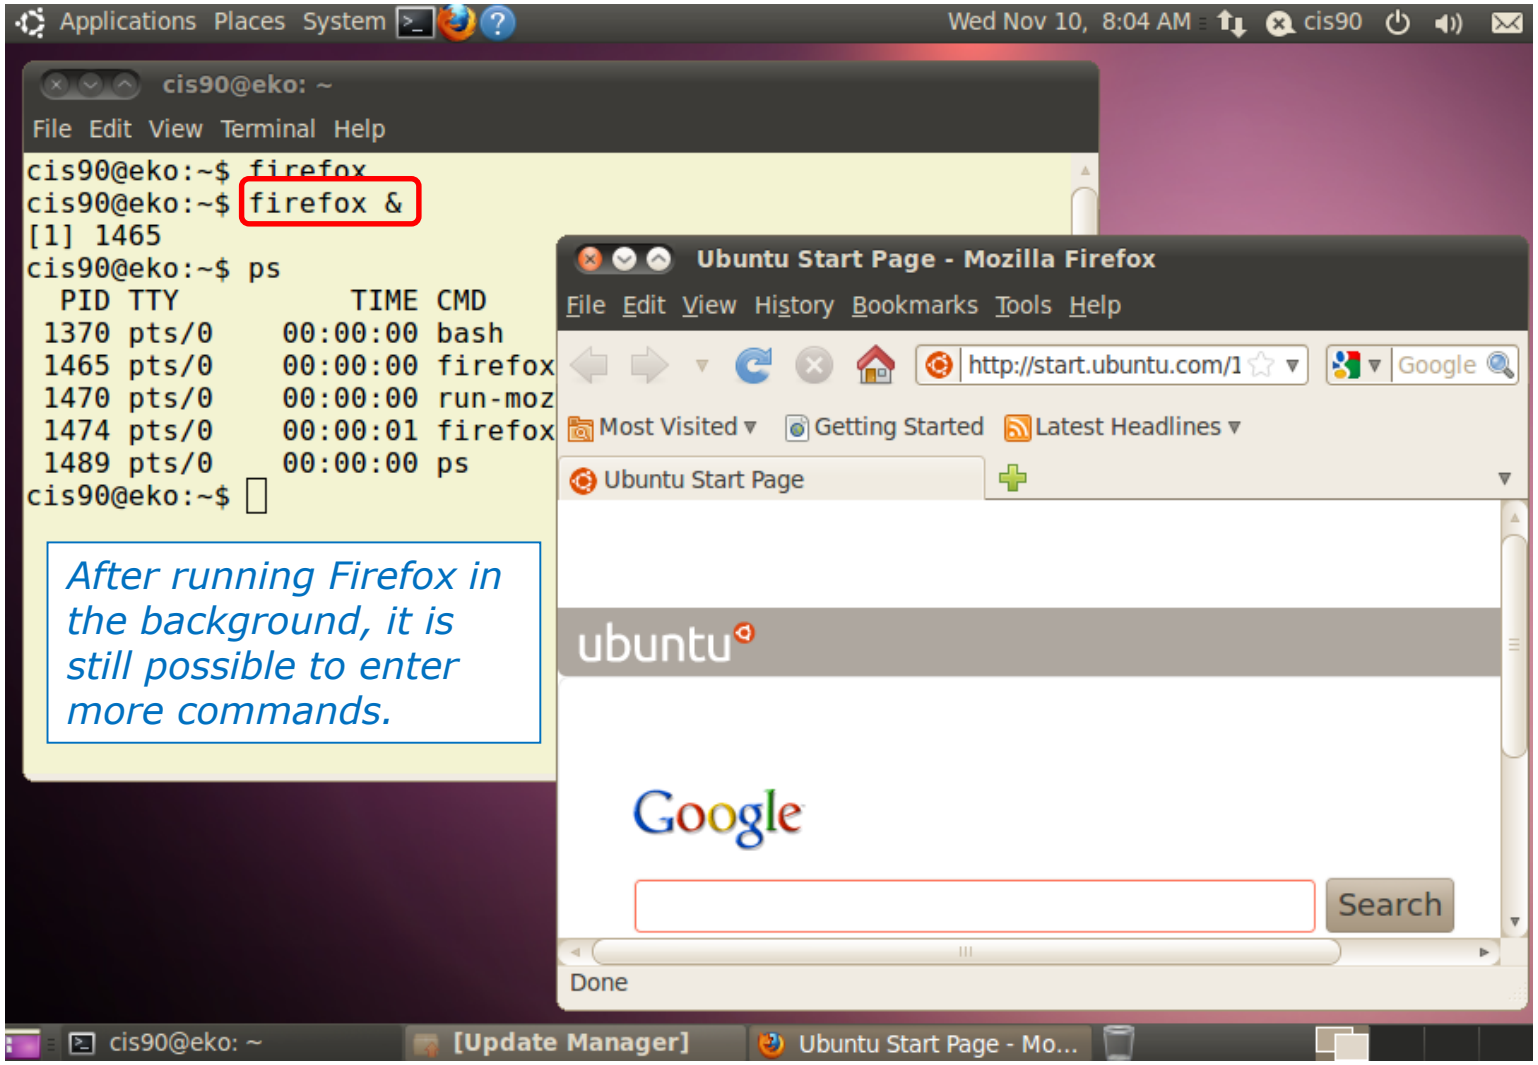
Job Control

Using **&** to run a command in the background



Job Control

Using **&** to run a command in the background



& append to a command to run it in the background

Example 1

```
/home/cis90/simben $ grep -r "playing hot potato" /usr 2> /dev/null
```

No prompt

For long running commands or scripts you must wait for the command to finish before you type more commands

Example 2

```
/home/cis90/simben $ grep -r "playing hot potato" /usr /opt 2> /dev/null &
[1] 7921
/home/cis90/simben $ date
Fri Apr 13 13:44:00 PDT 2018
```

Hit enter to get the prompt and continue working while the find command runs in the background

Job Control (Review)

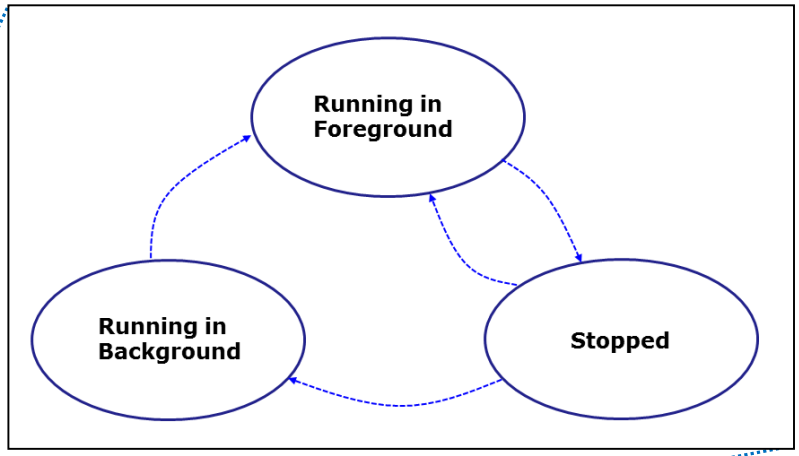
Job Control
A feature of the bash shell

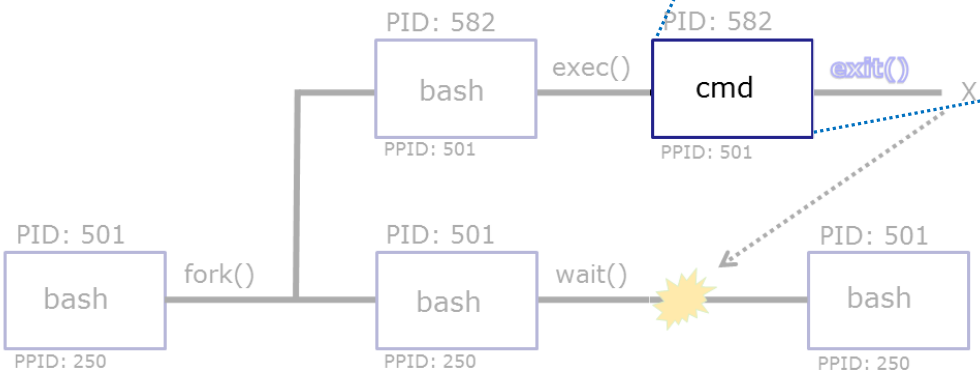
&	Append to a command to run it in the background
bg	Resumes a suspended job in the background
fg	Brings the most recent background process to the foreground
jobs	Lists all background jobs

*Use **jobs**, **bg**, **fg** to list and resume jobs in the foreground or background*

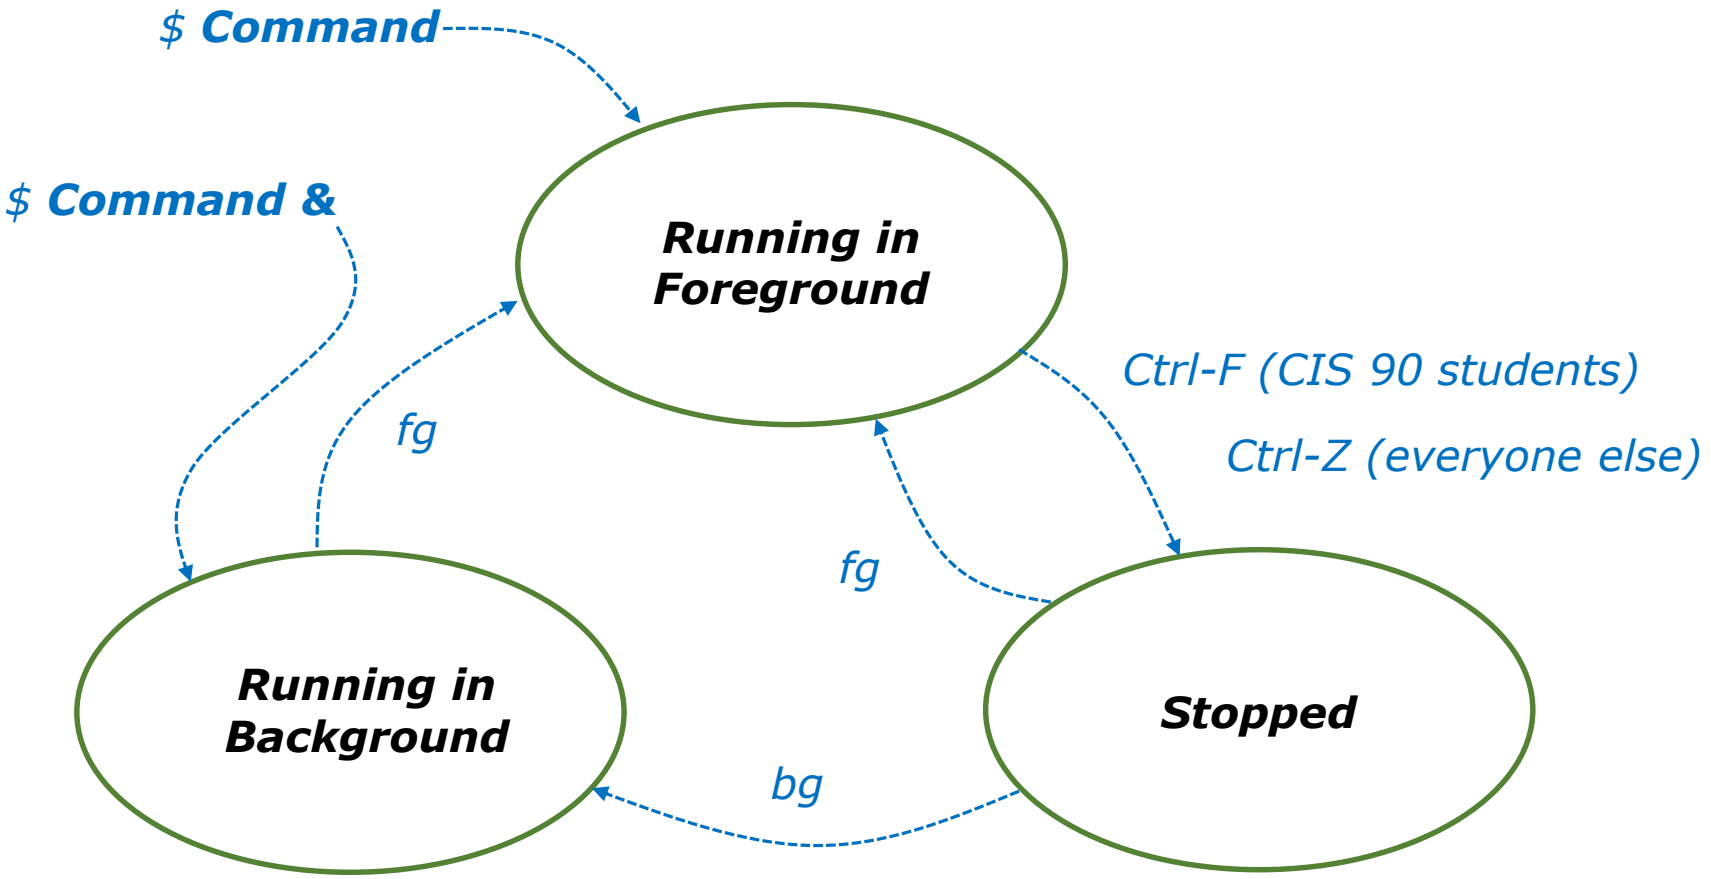
Job Control
A feature of the bash shell

*When a process is **running** (status=R) the user can **stop** it (status=T) and choose whether it runs in the **background** or **foreground***





Job Control
A feature of the bash shell



*Use the **jobs** command to view stopped and background jobs*

Job Control

Find out with keystroke combination is configured to suspend a process

Note: ^ is the Ctrl key

```
/home/cis90ol/simmsben $ stty -a
speed 38400 baud; rows 24; columns 80; line = 0;
intr = ^C; quit = ^\; erase = ^?; kill = ^U; eof = ^D; eol = <undef>;
eol2 = <undef>; swtch = <undef>; start = ^Q; stop = ^S; susp = ^F; rprnt = ^R;
werase = ^W; lnext = ^V; flush = ^O; min = 1; time = 0;
-parenb -parodd cs8 -hupcl -cstopb cread -clocal -crtscts -cdtrdsr
-ignbrk -brkint -ignpar -parmrk -inpck -istrip -inlcr -igncr icrnl ixon -ixoff
-iuclc -ixany -imaxbel -iutf8
opost -olcuc -ocrnl onlcr -onocr -onlret -ofill -ofdel nl0 cr0 tab0 bs0 vt0 ff0
isig icanon iexten echo echoe echok -echonl -noflsh -xcase -tostop -echoprt
echoctl echoke
/home/cis90ol/simmsben $
```

In this case it is Ctrl-F that will be used to suspend a process

How is yours configured?

Job Control
Managing jobs

```
/home/cis90ol/simmsben $ sleep 120
Ctrl-Z or Ctrl-F (to suspend process)
[1]+  Stopped                 sleep 120

/home/cis90ol/simmsben $ sleep 110
Ctrl-Z or Ctrl-F (to suspend process)
[2]+  Stopped                 sleep 110

/home/cis90ol/simmsben $ sleep 100
Ctrl-Z or Ctrl-F (to suspend process)
[3]+  Stopped                 sleep 100

/home/cis90ol/simmsben $ jobs
[1]   Stopped                 sleep 120
[2]-  Stopped                 sleep 110
[3]+  Stopped                 sleep 100
```

Lets start up 3 sleep commands and suspend each of them.

Note: The sleep command is a simple way to run a command that will take awhile to finish.

***sleep 120** will last 120 seconds before it is finished.*

Job Control
Managing jobs

```
/home/cis90ol/simmsben $ jobs
[1]   Stopped                 sleep 120
[2]-  Stopped                 sleep 110
[3]+  Stopped                 sleep 100

/home/cis90ol/simmsben $ ps -l
F S   UID   PID  PPID  C PRI  NI ADDR SZ WCHAN  TTY          TIME CMD
0 S  1082  5364  5363  0  75   0 -  1168 wait   pts/2    00:00:00 bash
0 T  1082  5452  5364  0  75   0 -   929 finish pts/2    00:00:00 sleep
0 T  1082  5453  5364  0  75   0 -   929 finish pts/2    00:00:00 sleep
0 T  1082  5454  5364  0  75   0 -   929 finish pts/2    00:00:00 sleep
0 R  1082  5459  5364  0  77   0 -  1054 -      pts/2    00:00:00 ps
```

Note, all three processes are sTopped

Job Control
Managing jobs

```
/home/cis90ol/simmsben $ bg 2
[2]- sleep 110 &
/home/cis90ol/simmsben $ jobs
[1]-  Stopped                 sleep 120
[2]   Running                 sleep 110 &
[3]+  Stopped                 sleep 100
```

Let's resume job 2 in the background

```
/home/cis90ol/simmsben $ bg 1
[1]- sleep 120 &
/home/cis90ol/simmsben $ jobs
[1]   Running                 sleep 120 &
[2]-  Running                 sleep 110 &
[3]+  Stopped                 sleep 100
```

Let's resume job 1in the background

```
/home/cis90ol/simmsben $ fg 3
sleep 100
```

Let's resume job 1 in the foreground

At this point we lose control of the keyboard again until sleep 100 is finished

Job Control

Managing jobs

```
/home/cis90ol/simmsben $ jobs
[1]-  Done
sleep 120
[2]+  Done
sleep 110
```

Background jobs are all done!

Load Balancing & Scheduling (Review)

Load Balancing

The **at** command:

- reads from stdin for a list of commands to run
- runs those commands at the specified time
- Any output from those commands will be emailed
- Use **atq** and **atrm** to manage scheduled commands

*Use **at** to schedule commands to run in the future*

Load Balancing

Managing queued jobs

```
at now + 5 minutes

at now + 1 hour

at 7:58AM

at 7:47PM 11/25/2016

at teatime
```

Ways to specify future times

Load Balancing

Managing queued jobs

```
/home/cis90/simben $ atq
25      2011-11-12 14:09 a simben90
28      2011-12-12 03:00 a simben90
27      2011-11-19 12:10 a simben90
26      2011-11-12 16:00 a simben90
24      2011-11-12 12:14 a simben90
```

*The **atq** command lists jobs queued to run in the future*

```
/home/cis90/simben $ atrm 24
/home/cis90/simben $ atq
25      2011-11-12 14:09 a simben90
28      2011-12-12 03:00 a simben90
27      2011-11-19 12:10 a simben90
26      2011-11-12 16:00 a simben90
```

*The **atrm** command is used to remove jobs from the queue*

```
/home/cis90/simben $ jobs
```

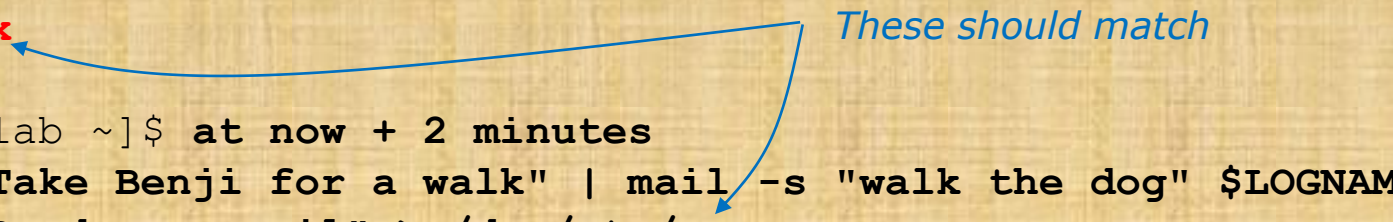
*Note: The **jobs** command lists processes running or suspended in the background and is NOT used for **at** commands.*

Load Balancing

Try it yourself with your own terminal device and username:

```
[rsimms@oslab ~]$ tty
/dev/pts/xx

[rsimms@oslab ~]$ at now + 2 minutes
at> echo "Take Benji for a walk" | mail -s "walk the dog" $LOGNAME
at> echo "Read your mail" > /dev/pts/xx
at> <EOT>  Ctrl-D
job 11 at 2012-11-05 11:02
[rsimms@oslab ~]$ atq
11      2012-11-05 11:02 a rsimms
[rsimms@oslab ~]$
```



Type what happens in the chat window:

text editors

There are lots of text editors …

Windows
- notepad
- notepad++
- textpad

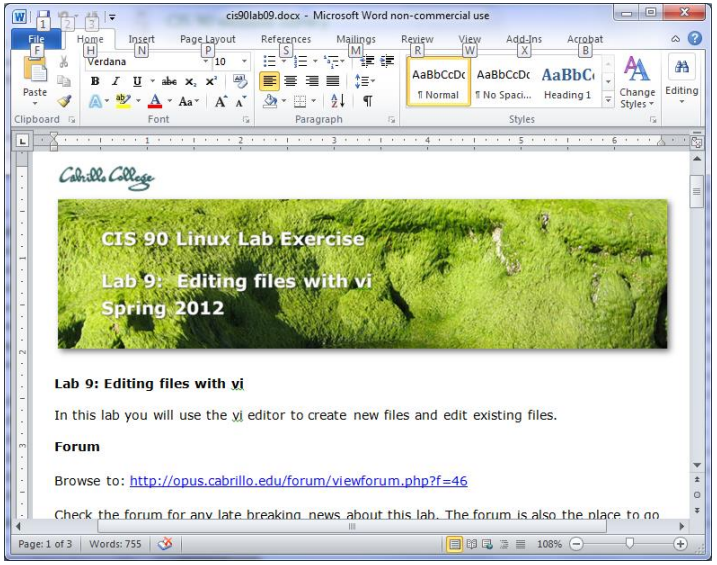
Mac
- TextWrangler

Linux
- gedit
- emacs
- nano
- vi
- jove

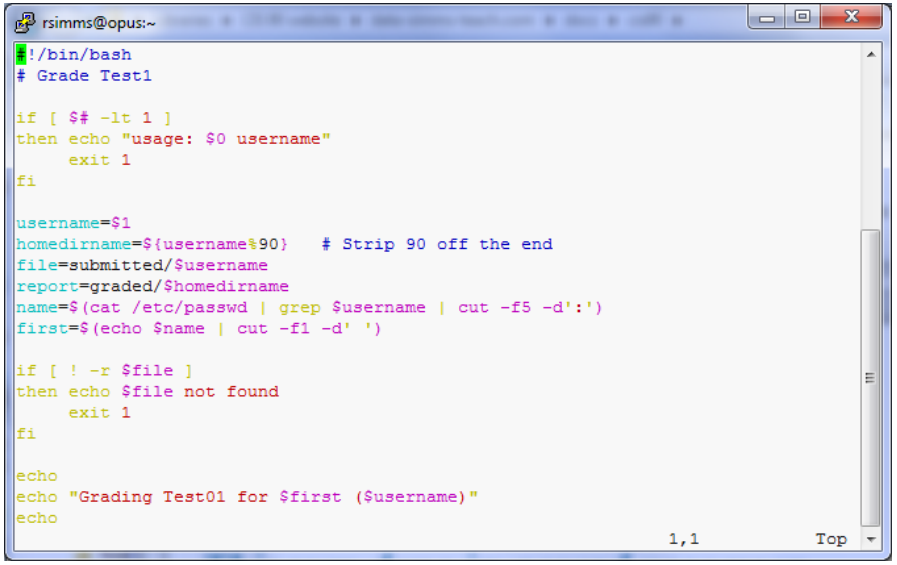
Thanks Maria!

Text editors and word processors are different!

- *Word processors are used by many different people to create documents containing text and graphics.*
- *Text editors are used by programmers to develop software and web designers to create web sites.*



Word processors *allow a rich set of formatting (fonts, sizes, styles, color) and graphics to be added to documents.*



Text editors *use color to show the language syntax*

vi 101

On Opus-II we are actually running VIM

```
/home/cis90/simben $ type -a vi
vi is aliased to `vim'
vi is /bin/vi
/home/cis90/simben $ type vim
vim is hashed (/usr/bin/vim)
```

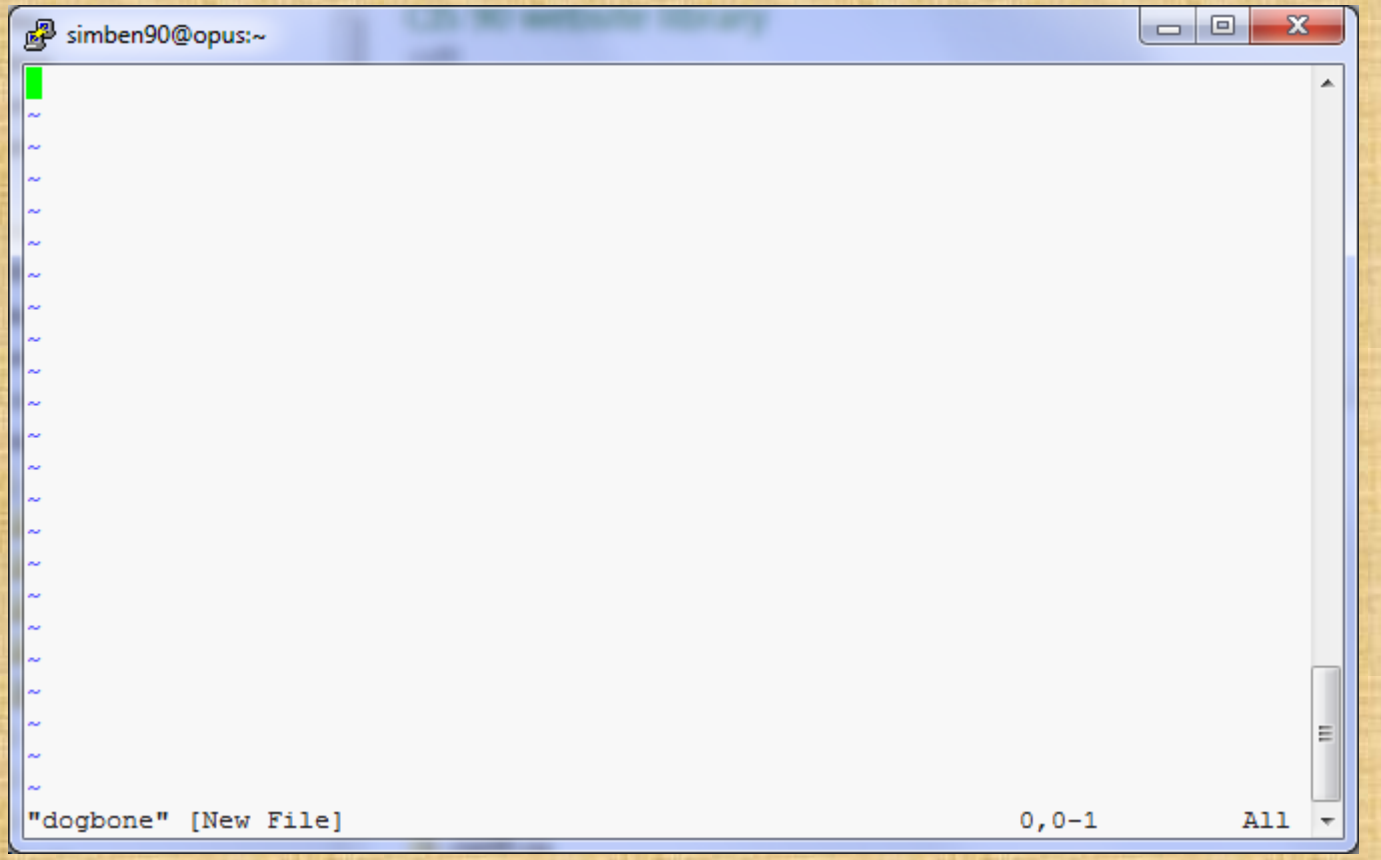
History:

- The original vi code was written by Bill Joy for BSD Unix
- Bill Joy co-founded Sun Microsystems in 1982
- vi (for "visual")
- vim is an enhanced version of vi

```
/home/cis90/simben $
/home/cis90/simben $ vi dogbone
```

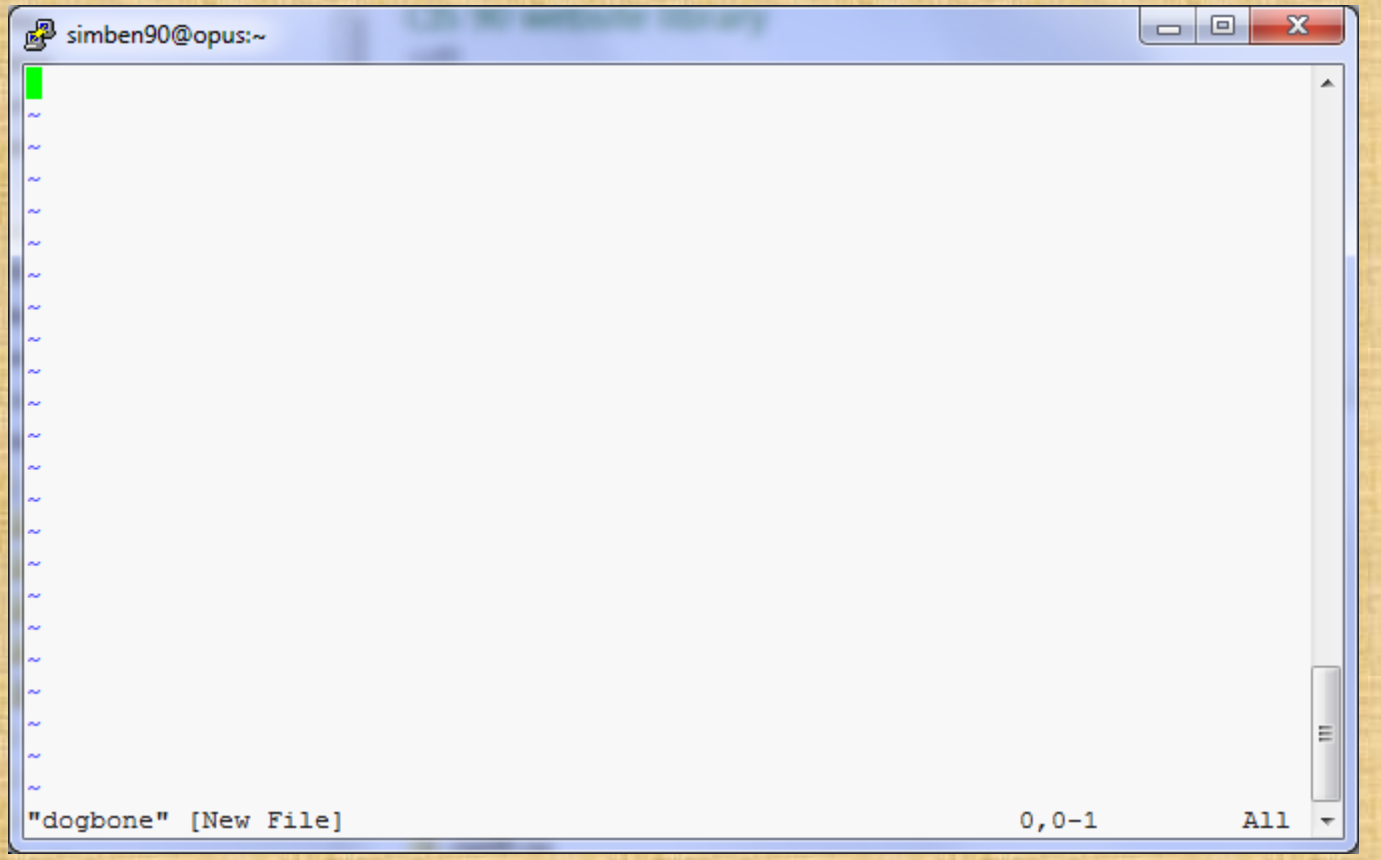
Type this

See this …



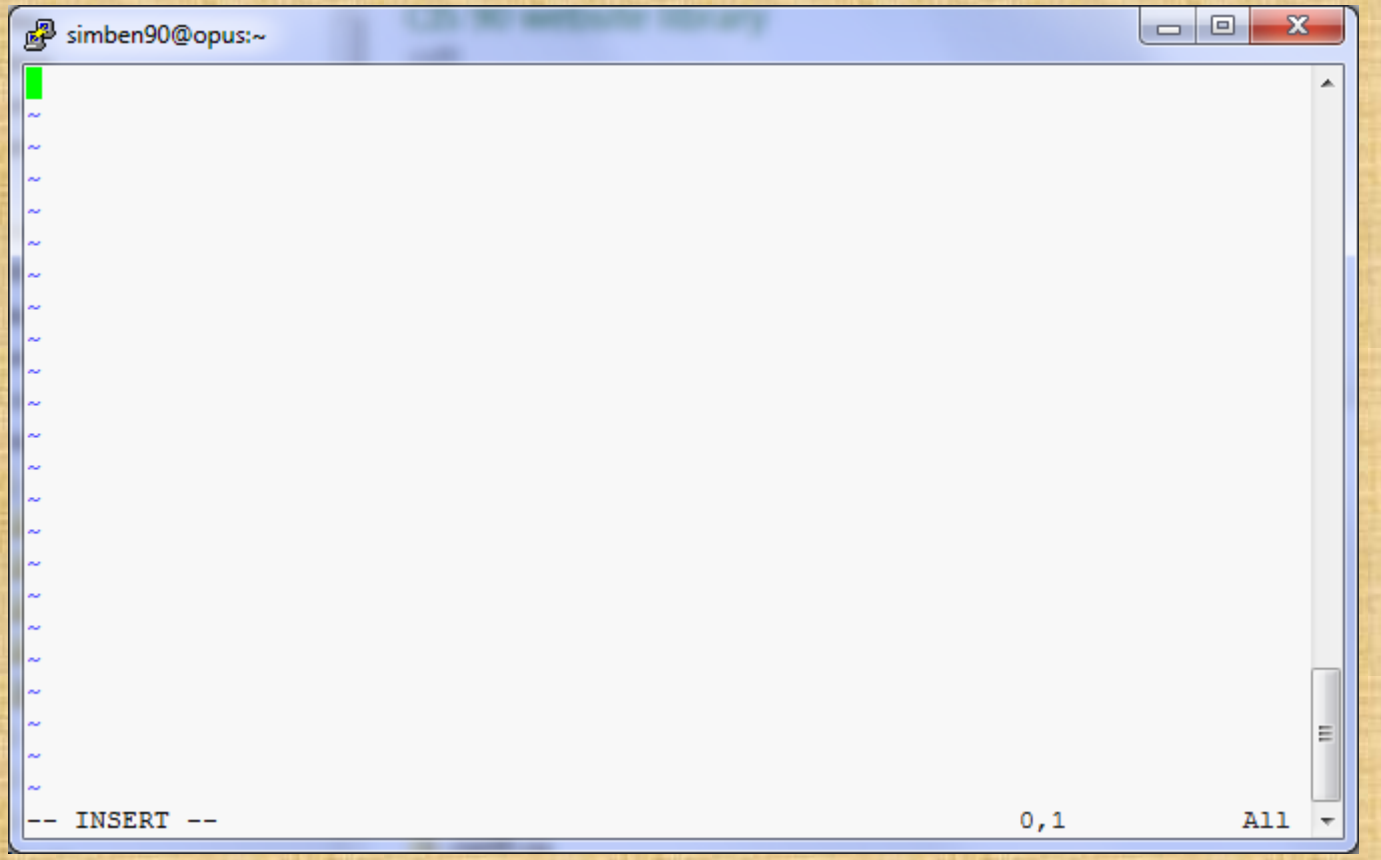
Take your hands OFF THE MOUSE – don't use it in vi!

*Tap the letter **i** key (for insert)*



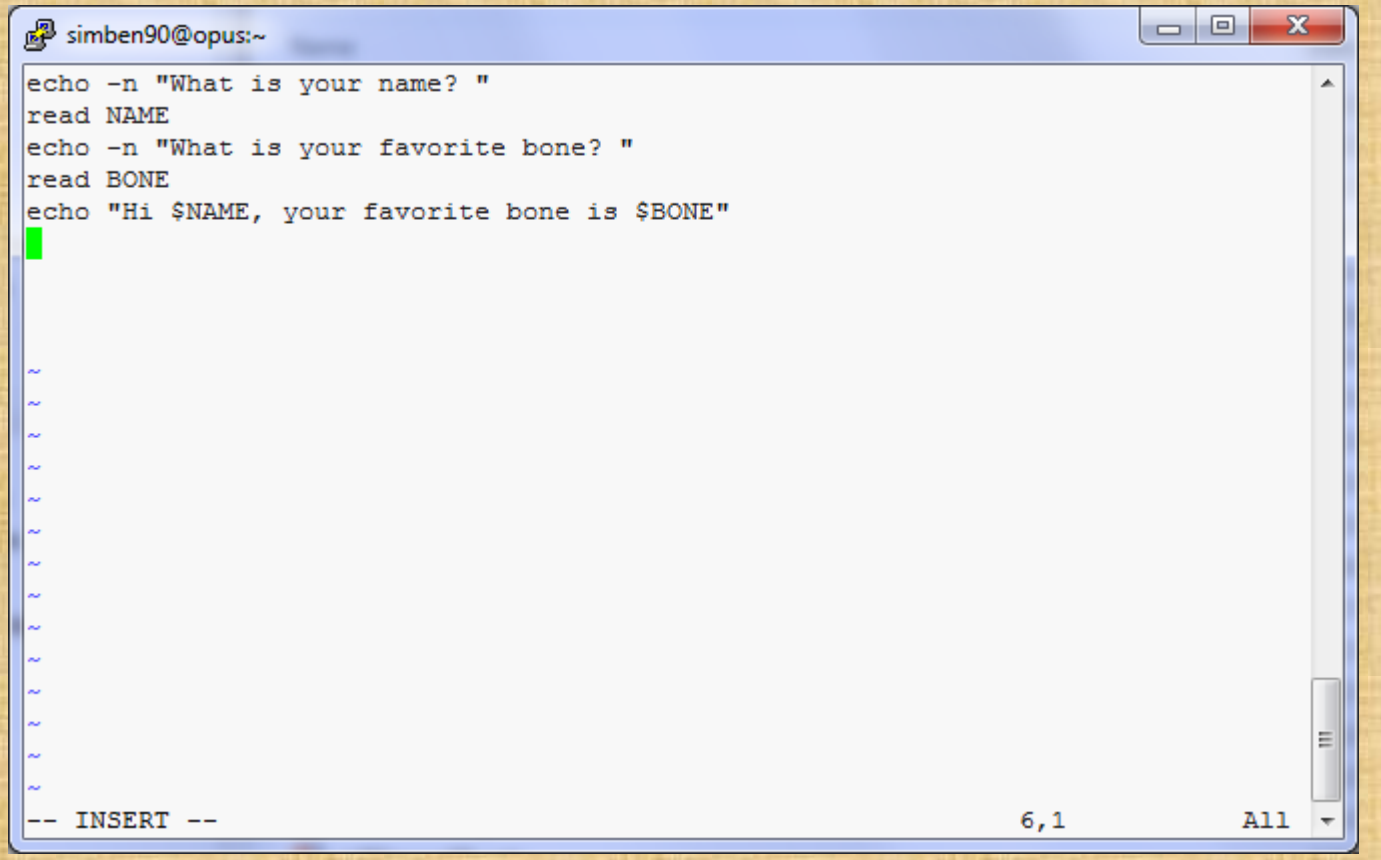
Keep your hands OFF THE MOUSE – don't use it in vi!

See this …



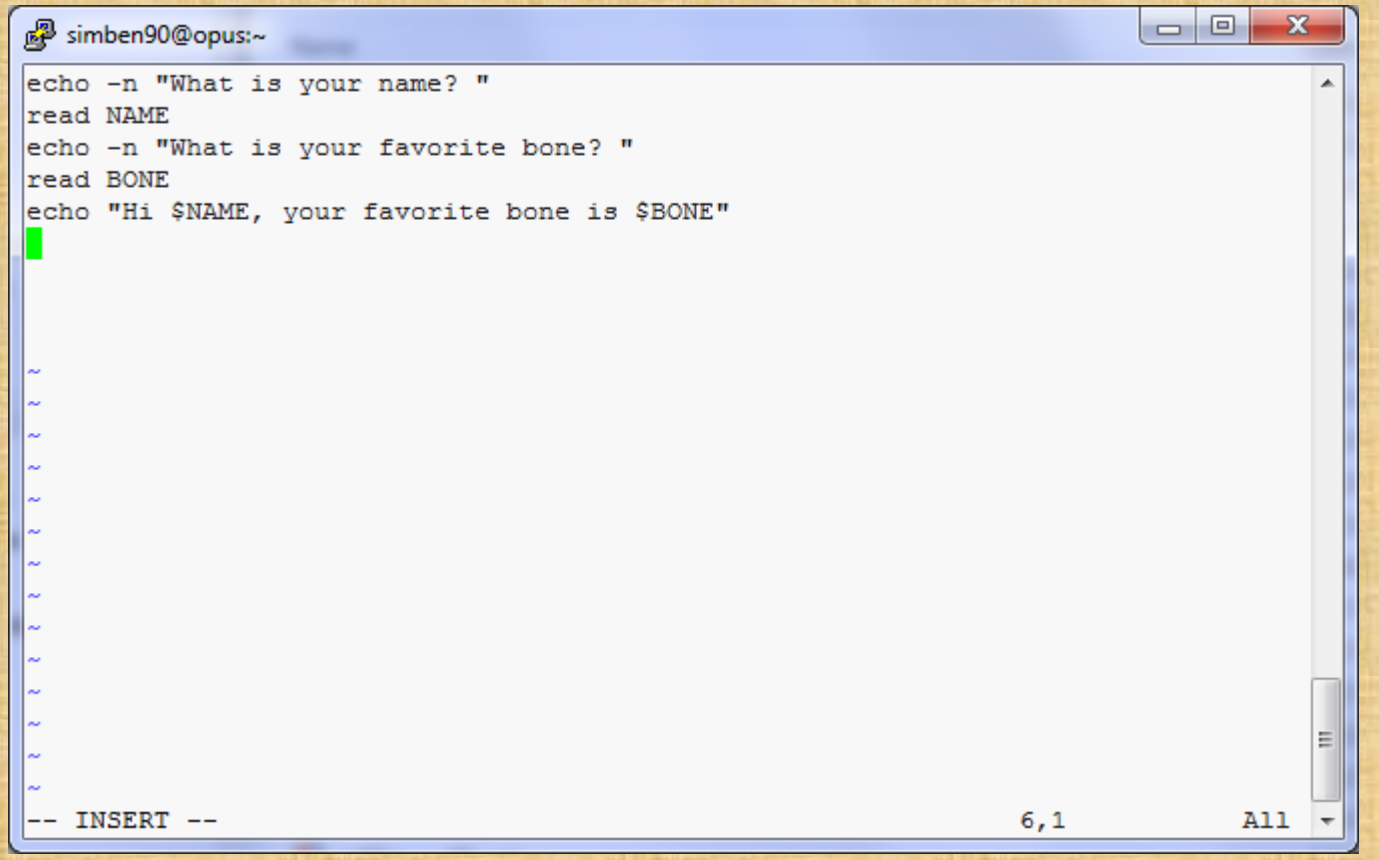
Keep your hands OFF THE MOUSE – don't use it in vi!

Very carefully type these five lines



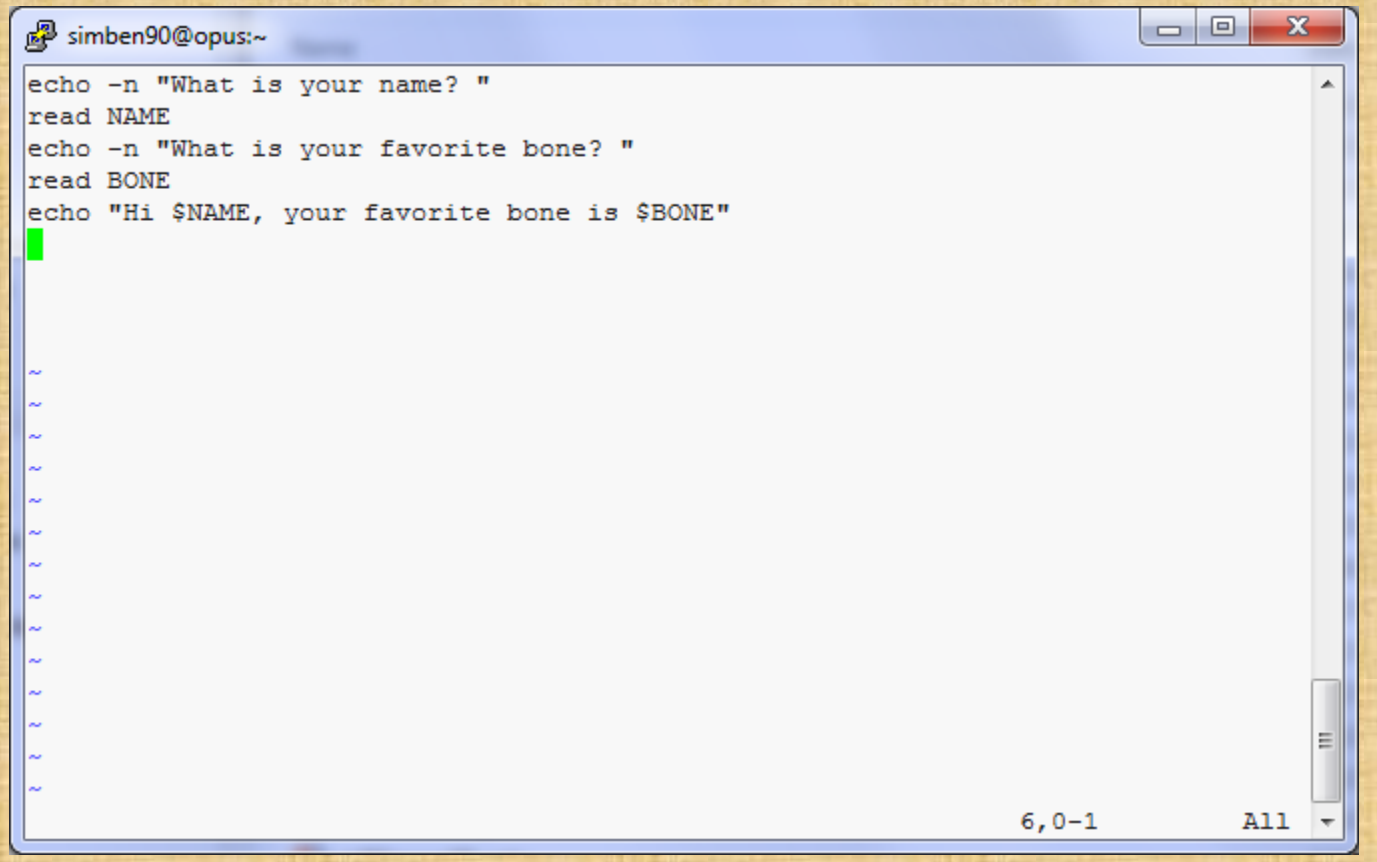
Keep your hands OFF THE MOUSE – don't use it in vi!

Have your neighbor check that your five lines are PERFECT



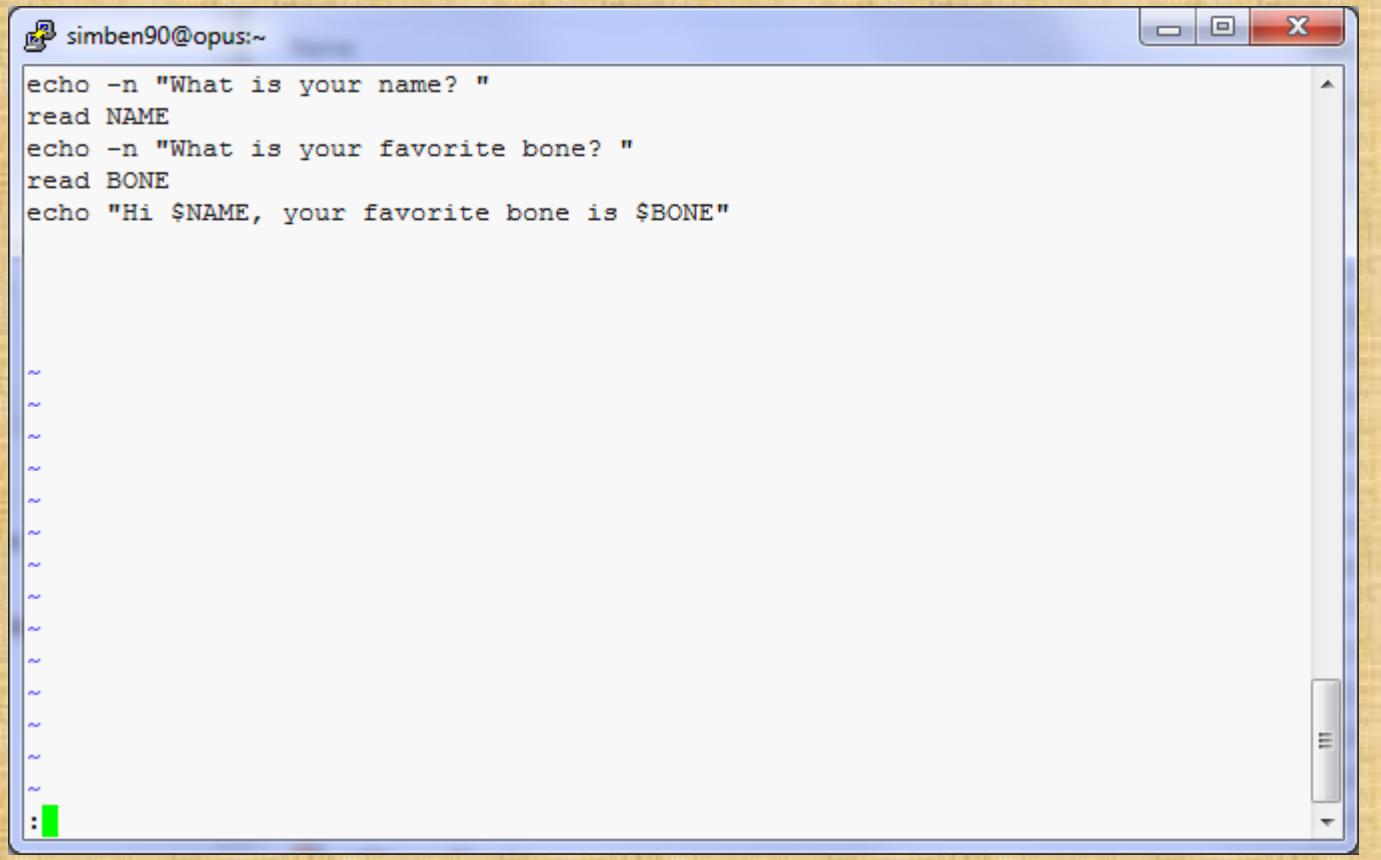
Keep your hands OFF THE MOUSE – don't use it in vi!

*Tap the **esc** key*



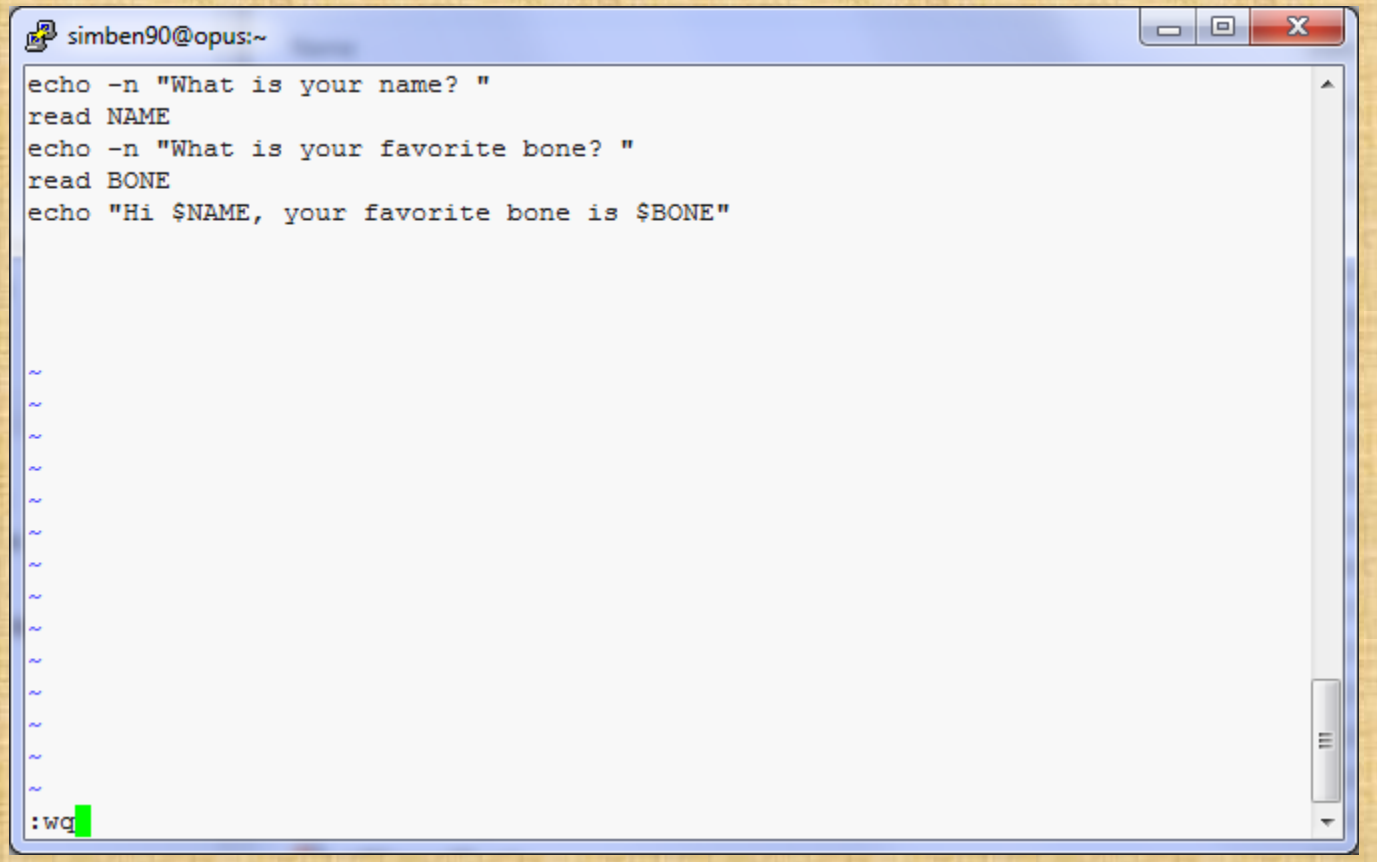
Keep your hands OFF THE MOUSE – don't use it in vi!

Type a **:**



Keep your hands OFF THE MOUSE – don't use it in vi!

*Type **wq***



Keep your hands OFF THE MOUSE – don't use it in vi!

Tap the enter key

```
/home/cis90/simben $ vi dogbone
/home/cis90/simben $
```

Add execute permissions and try your new script

```
/home/cis90/simben $ chmod +x dogbone

/home/cis90/simben $ dogbone
What is your name? Benji
What is your favorite bone? chicken
Hi Benji, your favorite bone is chicken
/home/cis90/simben $
```

vi

COMMAND mode

Command LINE mode

vi

Moving around in a file

Use in COMMAND mode

h moves the cursor one character to the left
j moves the cursor down one line
k moves the cursor up one line
l moves the cursor one character to the right

Try typing a number in front of these commands and notice what happens

^d scrolls down 10 lines
^u scrolls up 10 lines
^f page forward one page
^b page back one page

With vim (not vi) you can use arrow and page keys instead of these letter commands

Note: ^ is the Ctrl key

vi

Moving around in a file

Use in COMMAND mode

w moves the cursor one "word" forward
b moves the cursor one "word" back

Try typing a number in front of these commands and notice what happens

0 (zero) moves the cursor to the beginning of the line
$ moves the cursor to the end of the line

G moves the cursor to the last line in the file
1G moves the cursor to the first line in the file
105G moves the cursor to line 105

vi
Saving and Quitting

Use in command LINE mode

:w writes any changes to the file you are editing (like Save)

:q quits vi if you have saved your changes
:q! quits vi even if you haven't saved changes

:wq writes and quits
:wq! writes and quits vi even if you haven't saved changes

vi

Reading in and Writing out files

Use in command LINE mode

:w *filename* saves your file to a new name (like Save As)
:w! *filename* saves your file to a new name overwriting any previous data

:r *filename* reads in the contents of *filename* starting from the cursor position

:e *filename* replaces the current content with the content from *filename*

:%s /*string1*/*string2*/g replaces all string1 with string2 in the file

vi
Entering INSERT mode

From COMMAND mode.

i Ready to insert characters immediately before the current cursor position
I Ready to insert characters at the start of the current line

a Ready to append characters immediately after the current cursor position
A Ready to append characters at the end of the current line

o Ready to input characters in a new line that opens up below the cursor
O Ready to input characters in a new line that opens up above the cursor

vi
Cut, Copy, Pasting Commands

Use in COMMAND mode

x Deletes the current character
r Replace the current character with the character you type next

dw Deletes the current word
dd Deletes the current line

D Deletes to the end of the line

yy Copies a line to the clipboard buffer
p Pastes whatever is in the clipboard buffer below the current cursor
P Pastes whatever is in the clipboard buffer above the current cursor

vi
Miscellaneous Useful Commands

Use in COMMAND mode.

^g Tells you the filename you are editing and what line your cursor is on

u Undoes the last command you executed
^r Undo the undo (redo)

. Repeats the last command you executed

/string Searches for the string of characters in the file
n Finds the next occurrence of the current search string looking down the file
N Finds the next occurrence of the current search string looking up the file

~ Changes the case of the current character

Note: ^ is the Ctrl key

Use vi to edit your *edits/text.err* file

```

Status: R

Hey Homer,
I really appreciate that bone you sent me last week.
Let me know if you want to go mark some fence posts
this weekend.
Later,
Benji

&
```

The message Homer reads has all the typos fixed.

Fix an email message before sending

```
/home/cis90/simben/edits $ mail rsimms
Subject: test of vi
sdkfjas;dflkjas;lkdfj
~v
(continue)
.
EOT
/home/cis90/simben/edits $
```

In vi:
- Use i to enter insert mode
- make changes
- save with <Esc>:wq

A Tangent on Spell

spell command

```
/home/cis90/roddyduk/edits $ cat text
Welcome to the CIS 90 class !!

/home/cis90/roddyduk/edits $ spell text
CIS
```

spell *command flags CIS as misspelled word.*

How can we add CIS to the dictionary?

spell command

```
/home/cis90/roddyduk/edits $ cat text
Welcome to the CIS 90 class !!
/home/cis90/roddyduk/edits $ spell text
CIS
```

How can we add CIS to the dictionary?

```
/home/cis90/roddyduk/edits $ man spell
No manual entry for spell
/home/cis90/roddyduk/edits $ type spell
spell is hashed (/usr/bin/spell)
/home/cis90/roddyduk/edits $ file /usr/bin/spell
/usr/bin/spell: Bourne shell script text executable
/home/cis90/roddyduk/edits $ cat /usr/bin/spell
#!/bin/sh

# aspell list mimicks the standard unix spell program, roughly.

cat "$@" | aspell list --mode=none | sort -u

/home/cis90/roddyduk/edits $
```

Hmmm. No man page for spell ???????????

*OK, the actual command is **aspell***

spell command

```
ASPELL(1)                Aspell Abbreviated User's Manual                ASPELL(1)

NAME
       aspell - interactive spell checker

SYNOPSIS
       aspell [options] <command>

DESCRIPTION
       aspell  is  a utility that can function as an ispell -a replacement,
       as an independent spell checker, as  a  test  utility  to  test  out
       Aspell features, and as a utility for managing dictionaries.

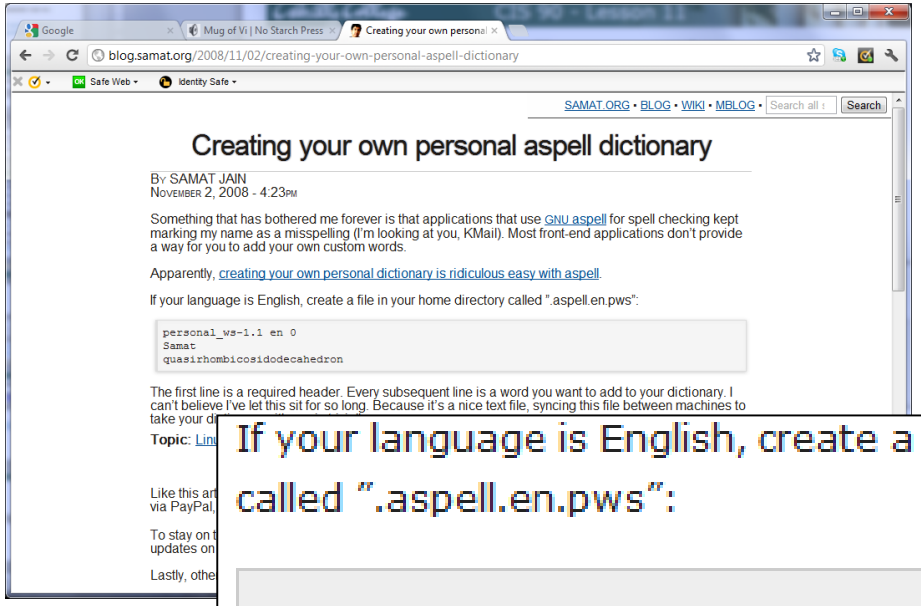
COMMANDS
       <command> is one of:

       -?,help
              display the help message

       -c,check file
              to spell-check a file
```

There must be a way to add CIS …. but … lets try google

spell command



How to add words to your dictionary

If your language is English, create a file in your home directory called ".aspell.en.pws":

```
personal_ws-1.1 en 0
Samat
quasirhombicosidodecahedron
```

Googling "linux aspell personal dictionary" yields this page

Bingo! Thank you Samat Jain

spell command

```
/home/cis90/roddyduk/edits $ cd
/home/cis90/roddyduk $ echo "personal_ws-1.1 en 0" >  .aspell.en.pws
/home/cis90/roddyduk $ echo "CIS" >> .aspell.en.pws
/home/cis90/roddyduk $ cd edits/
/home/cis90/roddyduk/edits $ spell text
```

This is how you would add your own custom dictionary to be used with spell checks

```
/home/cis90/simben $ cat edits/spellk
Spell Check

Eye halve a spelling chequer
It came with my pea sea
It plainly marques four my revue
Miss steaks eye kin knot sea.
Eye strike a key and type a word
And weight four it two say
Weather eye am wrong oar write
It shows me strait a weigh.
As soon as a mist ache is maid
It nose bee fore two long
And eye can put the error rite
Its rare lea ever wrong.
Eye have run this poem threw it
I am shore your pleased two no
Its letter perfect awl the weigh
My chequer tolled me sew.

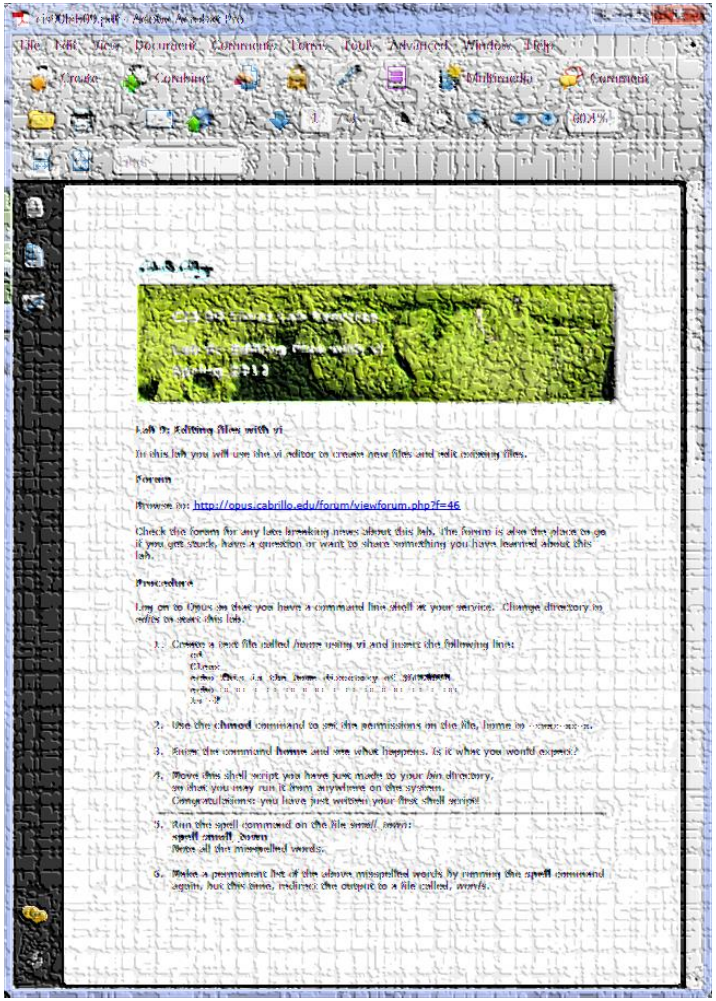
/home/cis90/simben $ spell edits/spellk
chequer
```

How would you add "chequer" (the British spelling) to your personal dictionary?

Copy the commands used into the chat window when finished

```
$ echo "personal_ws-1.1 en 0" > ~/.aspell.en.pws
$ echo "chequer" >> ~/.aspell.en.pws
```

Assignment



Lab 9 will help
you start building
your vi skills!

Instructor: remember to mail students the tech file!

~/cis90/lab09/mail-langs-all

or

at *<end-of-class>*
at> **/home/rsimms/cis90/lab09/mail-langs-all**
at> **<Ctrl-d>**

Wrap up

New commands:

vi	Run vi editor

New Files and Directories:

na	na

Next Class

Assignment: Check Calendar Page on web site to see what is due next week.

Lab 9 Five Posts

Quiz questions for next class:

- How do you send a SIGKILL to one of your own processes?
- What vi command is used to exit vi without saving any of the changes you made?
- What vi commands are used for copy and paste?

Backup

The **mystery** of Ctrl-Z vs Ctrl-F

Signals
Special keystrokes

Note: ^ is the Ctrl key

```
/home/cis90/roddyduk $ stty -a
speed 38400 baud; rows 26; columns 78; line = 0;
intr = ^C; quit = ^\; erase = ^?; kill = ^U; eof = ^D; eol = <undef>;
eol2 = <undef>; swtch = <undef>; start = ^Q; stop = ^S; susp = ^F; rprnt = ^R;
werase = ^W; lnext = ^V; flush = ^O; min = 1; time = 0;
```

Ctrl-f

```
[rsimms@opus ~]$ stty -a
speed 38400 baud; rows 39; columns 84; line = 0;
intr = ^C; quit = ^\; erase = ^?; kill = ^U; eof = ^D; eol = <undef>; eol2 = <undef>;
swtch = <undef>; start = ^Q; stop = ^S; susp = ^Z; rprnt = ^R; werase = ^W;
lnext = ^V; flush = ^O; min = 1; time = 0;
```

Ctrl-z

Why does the keystroke to send a Suspend (SIGTSTP or 20) signal differ between roddyduk (Ctrl-F) and rsimms (Ctrl-Z)?

Job Control
A feature of the bash shell

Ctrl-Z or Ctrl-F (sends SIGTSTP 20 signal)
- Stops (suspends) a foreground process

```
[rsimms@opus ~]$ sleep 5

[1]+  Stopped                 sleep 5
```

Ctrl-Z is tapped which stops the sleep command

PID 7728 is stopped

```
[rsimms@opus ~]$ ps -l  -u rsimms
F S   UID   PID  PPID  C PRI  NI ADDR SZ WCHAN  TTY          TIME CMD
5 S   201  5368  5365  0  75   0 -  2460 -      ?        00:00:00 sshd
0 S   201  5369  5368  0  76   0 -  1165 wait   pts/0    00:00:00 bash
5 S   201  6203  6200  0  75   0 -  2491 -      ?        00:00:00 sshd
0 S   201  6204  6203  0  75   0 -  1165 -      pts/6    00:00:00 bash
0 T   201  7728  6204  0  75   0 -   926 finish pts/6    00:00:00 sleep
0 R   201  7730  5369  0  78   0 -  1062 -      pts/0    00:00:00 ps
[rsimms@opus ~]$
```

Job Control

A feature of the bash shell

bg command

- Resumes a suspended job in the background

```
[rsimms@opus ~]$ sleep 5

[1]+  Stopped                 sleep 5
[rsimms@opus ~]$ bg
[1]+ sleep 5 &
[rsimms@opus ~]$
```

bg resumes the sleep command

PID 7728 is gone

```
[rsimms@opus ~]$ ps -l  -u rsimms
F S   UID   PID  PPID  C PRI  NI ADDR SZ WCHAN  TTY          TIME CMD
5 S   201  5368  5365  0  75   0 -  2460 -      ?        00:00:00 sshd
0 S   201  5369  5368  0  76   0 -  1165 wait   pts/0    00:00:00 bash
5 S   201  6203  6200  0  75   0 -  2491 -      ?        00:00:00 sshd
0 S   201  6204  6203  0  75   0 -  1165 -      pts/6    00:00:00 bash
0 R   201  7742  5369  0  78   0 -  1061 -      pts/0    00:00:00 ps
[rsimms@opus ~]$
```

Signals
Jim's app script

rsimms@opus:/home/cis90/depot

```
#!/bin/sh
#
# app - script to demostrate use of signals
#
# Usage:  run app with no options or parameters
#
# Send signals to it with keystrokes or kill command
#
# Notes:
# stty -echo stop the display of characters typed
# stty echo makes typed characters visible again
# stty susp ^Z sets suspend keystroke to Ctlr-Z (to stop forground processes)
# stty susp @ sets suspend character to @ (to stop foreground processes)
#
trap '' 2  #Ignore SIGINT
trap 'echo -n quit it!' 3 #Handle SIGQUIT
trap 'stty echo susp ^Z;echo ee; echo cleanup;exit' 15 #Handle SIGTERM
clear
banner testing
stty -echo susp @
sleep 1
echo  one
sleep 1
echo two
sleep 1
echo -n thr
while :
do sleep 1
done
~
                                                          13,1          All
```

This is why Ctrl-F (suspend) stopped working and we had to use Ctrl-Z

Tangent on bg and SIGCONT

Signals

What is signal 18?

Running process gets a signal

Signals

SIGSTKFLT	16	Stack fault
SIGCHLD	17	Child process has stopped or exited, changed (POSIX)
SIGCONT	18	Continue executing, if stopped (POSIX)
SIGSTOP	19	Stop executing(can't be caught or ignored) (POSIX)
SIGTSTP	20	Terminal stop signal (POSIX) ***Ctrl-Z or Ctrl-F***
SIGTTIN	21	Background process trying to read, from TTY (POSIX)
SIGTTOU	22	Background process trying to write, to TTY (POSIX)
SIGURG	23	Urgent condition on socket (4.2 BSD)
SIGXCPU	24	CPU limit exceeded (4.2 BSD)
SIGXFSZ	25	File size limit exceeded (4.2 BSD)
SIGVTALRM	26	Virtual alarm clock (4.2 BSD)
SIGPROF	27	Profiling alarm clock (4.2 BSD)
SIGWINCH	28	Window size change (4.3 BSD, Sun)
SIGIO	29	I/O now possible (4.2 BSD)
SIGPWR	30	Power failure restart (System V)

Signal 18 continues a stopped process ... isn't that what bg does?

The bg command is used to resume a stopped process

```
/home/cis90/roddyduk $ sleep 60
```
Ctrl-F (or Ctrl-Z) typed here
```
[1]+  Stopped                 sleep 60
/home/cis90/roddyduk $ bg
[1]+ sleep 60 &
/home/cis90/roddyduk $ jobs
[1]+  Running                 sleep 60 &
/home/cis90/roddyduk $ jobs
[1]+  Running                 sleep 60 &
/home/cis90/roddyduk $ jobs
[1]+  Done                    sleep 60
/home/cis90/roddyduk $
```

bg resumed the stopped process which runs till it is finished

*Instead of using **bg** to resume a stopped process in the background, lets try a SIGCONT (signal 18) instead*

```
/home/cis90/roddyduk $ sleep 60
Ctrl-F (or Ctrl-Z) typed here
[1]+  Stopped                 sleep 60
/home/cis90/roddyduk $ ps -l
F S   UID   PID  PPID  C PRI  NI ADDR SZ WCHAN  TTY          TIME CMD
0 S  1000 10705 10704  0  76   0 -  1165 wait   pts/0    00:00:00 bash
0 T  1000 10743 10705  0  75   0 -   926 finish pts/0    00:00:00 sleep
0 R  1000 10744 10705  0  78   0 -  1051 -      pts/0    00:00:00 ps
/home/cis90/roddyduk $ jobs
[1]+  Stopped                 sleep 60
/home/cis90/roddyduk $ kill -18 10743
/home/cis90/roddyduk $ jobs
[1]+  Running                 sleep 60 &
/home/cis90/roddyduk $ ps -l
F S   UID   PID  PPID  C PRI  NI ADDR SZ WCHAN  TTY          TIME CMD
0 S  1000 10705 10704  0  75   0 -  1165 wait   pts/0    00:00:00 bash
0 S  1000 10743 10705  0  85   0 -   926 322800 pts/0    00:00:00 sleep
0 R  1000 10746 10705  0  77   0 -  1050 -      pts/0    00:00:00 ps
/home/cis90/roddyduk $ jobs
[1]+  Running                 sleep 60 &
/home/cis90/roddyduk $ jobs
[1]+  Running                 sleep 60 &
/home/cis90/roddyduk $ jobs
[1]+  Done                    sleep 60
```

Note sending a 18 signal or using the bg command will resume a stopped process
